Introduction

The purpose of this study was to provide the organizers of the Montana Folk Festival with an understanding of their attendees and the total money spent by those surveyed in Butte. The population of interest was attendees of the 2011 Montana Folk Festival and the sample was random from that population. Of the attendees, 437 returned completed surveys.

Methods

Surveys were given to festival goers by random selection so as to attempt to represent the whole population. Volunteers were stationed near rest rooms, concert stages, and exit points. They intercepted people randomly on each of the three festival days. The survey consisted of 31 questions (see Appendix C). People willing to fill out the survey were given a clipboard, pen, and a survey. No documentation of the number of refusals was recorded. Volunteers collected completed surveys at the site of the intercept.

Results

Of the 437 respondents, 77% (336) were from Montana and 23% (101) were from out of state or country (see Tables 1 and 2). The mean age of respondents was 49.10. The mean group size was 4.08. Of those who responded to the survey, 35% (152) reported that they spent a night or nights away from home. The mean of nights away from home was 3.85. The mean number of nights spent in Montana was 3.03 while the mean number of nights spent in Butte was 1.35. Results of all other questions in this survey can be found in Appendix A.

**Expenditures**

Expenditure information was asked of all respondents. The survey asked that they report their best estimate of the total amount of money they and their family (if applicable) spent in Butte in the following categories: accommodations, food, transportation, retail/services, gratuity, entertainment/recreation, and licenses/entrance fees/admissions. The results are presented in three ways. Table 3 presents the expenditure data of only the respondents who reported spending money in the categories. Table 4 presents expenditure data which includes everyone, even those who reported that they did not spend money in some categories. Table 5 presents the mean expenditures of all non-resident respondents and the total mean expenditure by non-resident visitor groups.

The mean expenditure of those who spent money for each category can be found in Table 3 along with the percentage of people who reported that they spent money in that category. The last column provides the total dollars spent by respondents who reported spending money in each category. The total reported expenditure for respondents who spent was $85,350.27.

Expenditure calculations in Table 4 are of everyone who responded to the survey. This table shows mean expenditures of all respondents in each category. The mean expenditure of all respondents was $195.59 per visitor group. Dollars spent by individual attendees could be calculated by dividing the mean expenditure by group size ($195.59/4.08 = $47.94).
