FOR IMMEDIATE RELEASE:

The objective measurement of socialization in children will be the topic of research to be conducted by Dr. James Walsh, assistant professor of psychology at Montana State University.

Dr. Walsh's research will be supported by a \$12,500 grant from the U. S. Public Health Service National Institute of Child Health and Human Development.

Through his research, Dr. Walsh says, he will "try to determine by objective means when and how children become aware of the linguistic norms of their culture and how rapidly and to what degree they conform to them."

He has conducted previous research in leadership in children in public and private schools in Washington and has done extensive work in the measurement of personality characteristics.

Dr. Walsh, who holds B.S., M.S. and Ph.D. degrees from the University of Washington, joined the MSU staff in autumn 1964.
