LUMBER MARKETING STUDY
RESULTS ARE RELEASED

A report on lumber marketing in western Montana has just been published by the Montana Forest and Conservation Experiment Station at the University of Montana, according to the author, Kent T. Adair, assistant professor of forestry at the UM.

Adair said the 20-page report, "A Profile of Lumber Marketing in Western Montana," is based on a cooperative study he conducted with the forestry school's experimentation station and the U.S. Forest Service.

The report describes the initial market for western Montana lumber and defines the method by which Montana manufacturers introduce their products into regional and national markets.

The report is available to interested persons through Adair at the UM Forestry School in Missoula.
