GRANT APPROVED FOR
PHARMACY RESEARCH

The University of Montana's School of Pharmacy has received approval of a request to the American Association of Colleges of Pharmacy for a $1,000 research grant for a UM undergraduate.

The award, one of the Mead Johnson Laboratories grants, will be used to support an investigation of "The Application of Ultrasonics in the Formulation of Pharmaceutical Suspensions," according to Dr. Bryant W. Fitzgerald, UM School of Pharmacy.

The study will begin in September and the student chosen will work part time during the academic year, completing the study on a full time basis the following summer.

The basis for selection of the student recipient will be a combination of a number of factors, according to Dr. Fitzgerald. In addition to a good academic standing the student must have demonstrated first a desire and secondly a willingness to pursue independent research.

Of the $1,000 check from the AACP, $800 will be allotted to the student and $200 will be used for purchase of chemicals and minor apparatus essential to the project.
