University of Montana Forestry School Dean Arnold W. Bolle has written a report entitled "The Forest Products Industry in Montana."

The study, which was co-authored by Mrs. Elizabeth Hannum, research assistant in forestry and William K. Gibson, forestry research associate, was published last week by the Montana Forest and Conservation Experiment Station.

The publication, Bulletin No. 31, is a 64-page report of the history, composition, and operations of the Montana industry. It includes information on the expansion and contraction of the forest industry in recent decades, the conditions and management of raw material supplies and the extent to which individual firms might benefit by manufacturing new products or using new marketing techniques. Special problems of the industry are investigated and a long range outlook is presented.

Copies of the report may be obtained by calling or writing the Forestry School Library at the University of Montana, Missoula.
