### Course Description:

This course will employ an intensive reading and discussion format to provide students with a sophisticated understanding of the rapidly changing strategic environment in the Asia-Pacific region. After an overview of key historical trends shaping the evolving strategic structure in Asia, including the forces leading to the Post-World War II strategic dominance by the United States, the course will use a largely geographic approach to hone in on an overriding theme: The recent emergence of China (and to a somewhat lesser extent, India) as a vital regional/global powers and the response by the U.S. and a range of other key actors to this phenomenon. We will conclude with an assessment of whether a “power shift” is in fact occurring in the Asia Pacific, and to what extent China may pose a threat to the U.S. in the near or middle term.

### *What this course will help you understand:*

- The background of America’s Cold War Containment Policy in Asia, particularly the impact of the Korean War in shaping that policy
- The causes and impact of the end of the Cold War in Asia
- Domestic and strategic forces that shaped China’s switch to a policy of “peaceful rise”
- India’s increased role as a strategic and economic “hedge” against China
- Updated focus on critical hotspots like Taiwan, the Korea peninsula, and the South China Sea in the context of the US “pivot” back to Asia
- The broader repercussions of China’s rise, including the potential strategic shift resulting from China’s challenge to US dominance in Asia

### Required Readings:

Alice Lyman Miller and Rich Wich, *Becoming Asia: Change and Continuity in Asian International Relations Since World War II* (Stanford University Press, 2011)

Ashley Tellis, et al (ed). *Asia Responds to its Rising Powers, China and India* (National Bureau of Asian Research, 2011).

Shambaugh and Yahuda, *International Relations of Asia* (Rowman & Littlefield, 2008), paperback

**PLUS** a number of readings/videos that are assigned as appropriate –largely to provide the most recent information on evolving events. These and all other assignments are noted on an updated Moodle page created for this course. **The latter page will be the defining source for final topics and assignments**

### **GRADING: Grades will be calculated as follows:**

- **Attendance and active participation in class: one-third\*\***
- **A mid-term analysis essay: one-third**
- **final take-home project (position paper): one-third**

**\*\*This class, it has been developed with a very heavy “reading and discussion” format. This puts a heavy burden on all students not only do the reading but to come to class having thought about it and to be prepared to discuss it. In class participation thus represents a significant part of the class grade. PLEASE NOTE: As part of that grade, two students will be assigned responsibility to prepare discussion questions for each class.**

### **Note About Taking Course for Graduate Credit:**

Those taking the class for **graduate** credit must: 1) Give a 15-20 minute presentation to the class based on research done that relates to the class, but is not otherwise covered, and 2) submit a mid-term exam and final project that are more complex and sophisticated than those expected from PSCI 330; 3) provide discussion questions an extra time.

### **Schedule of Class Topics:**

**Note: Once again, detailed assignments are noted on the class Moodle Page. This is the case because this class includes contemporary material, and some assignments will be made based on changing events.**
