MISSOULA--

Dr. Henry Eyring (Eye-ring), professor of chemistry and metallurgy (metal-urgee) at the University of Utah, Salt Lake City, will be a visiting guest lecturer Tuesday, April 13, at the University of Montana.

Eyring will discuss "Modern Chemical Kinetics," a lecture dealing with the rates of chemical reactions, at 12:10 p.m. in room 303 of the UM Forestry Building. His second lecture Tuesday, entitled "Mutations and the Degenerative Diseases of Aging, Including Cancer," will be at 4:10 p.m. in room 109 of the UM Chemistry-Pharmacy Building. Both discussions are open to the public without charge under the sponsorship of the UM Department of Chemistry.

The earlier talk will describe the development of modern chemical kinetics, in which Eyring had a major role. The latter session will be a chemical kineticist's view of the role of mutations in the degenerative diseases of aging.
