UNIVERSITY OF TEXAS PROFESSOR
LECTURES ON TEXAS GEOLOGY TONIGHT

A professor and former chairman of the Geology Department at the University of Texas, Dr. Stephen E. Clabaugh, will explain the "Tertiary History of the Big Bend Region of Texas" in a public lecture tonight (Jan. 18) at the University of Montana.

Dr. Clabaugh's address, in Geology 107 at 8 p.m., is one of a series in a speaker-sharing agreement between university geology departments.

Dr. Clabaugh was graduated from the University of Texas and completed his Ph.D. in geology at Harvard University in 1950. He has worked for the United States Geological Survey and, since 1947, has been on the staff of the University of Texas. He served as chairman of the Geology Department at the Austin institution from 1962 to 1966.

His work has included research on the geology of Montana corundum deposits, tungsten deposits in Nevada and several studies of the igneous and metamorphic geology of Texas and New Mexico. He is the author of several reports based upon his research findings.
