UM CHEMIST TO ADDRESS DRUG COMPANY

Dr. H. Richard Fevold, an associate professor of chemistry at the University of Montana, will describe his hormone research project to officials of the Upjohn Co., a pharmaceutical firm, in a seminar at company headquarters in Kalamazoo, Mich., later this month.

Dr. Fevold has been in Chicago for the past week, attending meetings of the Federation of American Societies of Experimental Biology. In an address to the assembly, he told participants of his study which is attempting to determine why animals differ with respect to the major hormones secreted by the adrenal cortex.

His research paper is entitled "In vitro Corticosteroid Biosynthesis by Adrenal Tissues from ACTH Stimulated Rabbits."

Dr. Fevold said the Chicago meeting is the largest single scientific conference in the United States from the standpoint of papers presented and number of scientists taking part.
