This Syllabus is brought to you for free and open access by the Course Syllabi at ScholarWorks at University of Montana. It has been accepted for inclusion in Syllabi by an authorized administrator of ScholarWorks at University of Montana. For more information, please contact [scholarworks@mso.umt.edu](mailto:scholarworks@mso.umt.edu).

# BIOH462: Principles of Medical Physiology Syllabus Spring 2015

## Instructor: Laurie Minns, PhD

- Office: HS412
- Phone: 406-243-6013
- Office Hours: Monday and Wednesday 10am-11am (or by appointment)
- Email: Laurie.Minns@mso.umt.edu

## General Course Information

This course provides a study of human physiology through the presentation of normal physiology, supplemented with discussion of selected diseases and pathophysiological conditions. Emphasis is placed upon correlating normal physiology with potential dysfunctions by increasing the learners' foundational knowledge of basic physiological principles and by introducing students to common laboratory tests and measures. Students will interpret and analyze case histories in pathophysiology and perform written assignments.

## Text Book Information

Grossman, SC and Porth, CM. Porth's Pathophysiology: Concepts of Altered Health States, 9<sup>th</sup> edition. 2014. ISBN 978-1-4511-4600-4

Bruyere, HJ. 100 Case Studies in Pathophysiology. . Lippincott Williams & Wilkins, Philadelphia, 2009. ISBN 978-0-7817-6145-1 (optional)

## Supplementary Readings

## Writing Course Learning Outcomes

- Use writing to learn and synthesize new concepts
- Formulate and express written opinions and ideas that are developed, logical, and organized
- Compose written documents that are appropriate for a given audience or purpose
- Revise written work based on constructive feedback
- Find, evaluate, and use information effectively and ethically
- Begin to use discipline-specific writing conventions
- Demonstrate appropriate English language usage

**Upper-division Writing Requirement in the Major Outcomes:** Upon completing the upper-division writing requirement, students should be more active, confident, and effective contributors to a body of knowledge and should understand the ethical dimensions of inquiry. Upon completing the upper-division writing requirement, the student should be able to:

## Learning Outcomes

- Identify and pursue more sophisticated questions for academic inquiry
- Find, evaluate, analyze, and synthesize information effectively from diverse sources

- Manage multiple perspectives as appropriate
- Recognize the purposes and needs of discipline-specific audiences and adopt the academic voice necessary for the chosen discipline
- Use multiple drafts, revision, and editing in conducting inquiry and preparing written work
- Follow the conventions of citation, documentation, and formal presentation appropriate to Biology
- Develop competence in information technology and digital literacy

### **BIOH462 Course Core Objectives**

- Demonstrate a fundamental understanding of the basic biophysical principles underlying the function of the human body.
- Relate normal physiological principles with the mechanisms of pathogenesis and disease.
- Interpret the relationship between cellular function and whole organ physiology.
- Integrate the relationship(s) between the control systems involved in regulating the major organ systems of the human body.
- Interpret and analyze underlying pathophysiology from case reports and discuss current treatments and their mechanism of action.
- Effectively perform scientific literature searches and discuss pertinent changes in the scientific landscape as it pertains to medical physiology.
- Analyze disease processes, their mechanism of action and how treatment options affect the disease at a cellular, organ, and organismal level.

### **Course Format**

BIOH462 will have an interactive component as students analyze and discuss case histories in pathophysiology. Primary scientific literature and patient case studies will be incorporated into course material and students are expected to think critically about the diseases and syndromes presented during class. Assessments will be based on two major writing assignments (including a revision of the final paper), quizzes and homework, a final powerpoint presentation and class participation. The writing component will consist of critically analyzing a patient case history of a disease process. A revision assignment will expand on the first assignment and will further incorporate a review of the current treatment options of that disease or syndrome based on a survey of the current scientific literature.

### **Course Requirements**

The study of human form and function requires exposure to the material from a practical as well as a theoretical approach. Consequently, regular attendance at all lecture classes is recommended to successfully complete this course. You must also accept the responsibility to ask questions if you do not understand the concepts. If absence from lecture is necessary due to illness, it is your responsibility to obtain notes from another student.

### **Peer review meetings:**

During four regularly scheduled class times, BIOH365 students will critique each others' assignments and provide written and verbal feedback. 15% of the student's total grade will be based on the amount and quality of participation during these peer-review meetings.

## Evaluation Methods

The following evaluation methods will be used to assess student performance in BIOH462:

Type of Assessment	Percent of Total Grade
<b>Research Summary: Congenital and Genetic Disorder (2pp.)</b>	<b>5</b>
<b>Research Summary: Leukemia/Lymphoma/Cancer (2 pp.)</b>	<b>5</b>
<b>Research Summary: Cancer Treatment: Oral presentation</b>	<b>5</b>
<b>Case Study Peer-review: Case Study Summary (2-3pp)</b>	<b>5</b>
<b>Case Study Peer-review: Differential Diagnosis (2-3pp)</b>	<b>5</b>
<b>Case Study Peer review: Mechanism of Action/Recommended Treatment (2-3pp.)</b>	<b>15</b>
<b>Case Study Peer Review: First Draft of Final Paper (5-6 pp.)</b>	<b>15</b>
<b>Case Study: Final Paper (revision) (8-10pp.)</b>	<b>20</b>
<b>Final Power point Presentation</b>	<b>20</b>
<b>Class participation</b>	<b>20</b>
<b>Total</b>	<b>100%</b>

## Grading System

Grades will be calculated based upon the following system:

- A ≥ 90%
- B ≥ 80%
- C ≥ 70%
- D ≥ 60%
- F < 60%

Please note that the grades for BIOH462 are not assessed by a plus/minus (+/-) grading system.

## Research summaries and writing workshops:

Students will complete assignments and quizzes both in class and through the course website (Moodle). Students are encouraged to download free reference management software so that they can learn to 'cite while they write'.

Details regarding the homework assignments will be given during class and MUST be submitted through Moodle. Students must also bring in a paper copy of the first draft of the final paper and participate in the writing workshop.

## Class Participation:

Students are expected to regularly attend and participate in class. Attendance is mandatory. **More than 2 unexcused absences will result in the drop of 1 letter grade.**

## Writing Assignments:

Students will complete several small writing assignments and two major writing assignments during the semester. The major writing assignments account for 35% of the final grade.

**Writing Outcomes:**

- 1) Students will analyze a patient case study of a pathophysiologic disease or syndrome
- 2) Students will discuss the laboratory tests used to evaluate the patient and relate their meaning to normal and abnormal human physiology
- 3) Students will review and discuss current and future disease processes by evaluating current scientific and clinical trial literature.
- 4) Students will use standard scientific format, including incorporating an abstract, tables that present test results, and citing references using standard scientific methods.
- 5) Students will learn to use reference-formatting software to cite while they write.

**Writing assignment Rubrics/Instructions are located at the end of this syllabus.**

**Makeup Work/Extra credit**

Absolutely no makeup work or extra credit is available. If students miss a quiz or an assignment during class, there is no opportunity to make-up the work. Student attendance and active participation is expected.

**Computers and Course Website Information:**

Students are expected to be familiar with computers and the Internet. Students are responsible for their own software and computer equipment maintenance and setup as recommended by the University of Montana. [Link to Computer labs](#) or <http://www.umt.edu/it/services/computerlabs/default.php>

**Class-Specific Computer Requirements:**

- Students are expected to download copies of course information from the Moodle website and to check email for class announcements.
- Students must have access to MSword and must be able to download a trial version of Endnote software to cite while they write.
- It is possible to complete the assignments without cite while you write software such as Endnote and Reference Manager, but this method is not recommended.
- The University of Montana maintains several computer labs on campus:
- For technical support for using Moodle, please contact [UM IT support](#), or (<http://umonline.umt.edu/tech-support/>)

**Dr. Minns follows academic policies as stated in the 2014-2015 UM Catalogue.**

Students are responsible for being familiar with [these policies](#) (<http://www.umt.edu/catalog/academics/academic-policy-procedure.php>).

These policies include but are not limited to:

- Student Conduct
- Class attendance
- Credit/No Credit Grading: Credit/No Credit grading is NOT AVAILABLE for this class.
- Audit
- Incomplete Grading Policy
- Plagiarism: All student work will be inspected for evidence of plagiarism.
- Plagiarism is the representing of another's work as one's own. It is a particularly intolerable offense in the academic community and is strictly forbidden. Students who

plagiarize may fail the course and may be remanded to Academic Court for possible suspension or expulsion. (See Student Conduct Code section of this catalog.)

- Students must always be very careful to acknowledge any kind of borrowing that is included in their work. This means not only borrowed wording but also ideas. Acknowledgment of whatever is not one's own original work is the proper and honest use of sources. Failure to acknowledge whatever is not one's own original work is plagiarism.

**Students with Disabilities:**

Students with disabilities may request reasonable modifications by contacting me. The University of Montana assures equal access to instruction through collaboration between students with disabilities, instructors, and Disability Services for Students. "Reasonable" means the University permits no fundamental alterations of academic standards or retroactive modifications.

**Location:** All lecture classes are taught in HS 207 from 1:10 – 2 PM. Students are expected to refer to the assigned readings from Porth's Pathophysiology to gain a better understanding of key disease processes.

**Lecture Schedule** (Dr. Minns may revise the detailed lecture schedule to address class needs).

Dates	Monday	Readings Porth
Jan . 26-Feb. 1	<b>Review Syllabus and Course Policies</b> <b>Concepts of Health and Disease</b> <b>Cell Function and growth</b> <b>Cellular Adaptation, Injury and Death</b> <b>Case Study Assignments</b>  <b>Genetic or Congenital Summary due Sunday Feb. 2</b>	<b>2-11</b> <b>64-100</b>

**Case Study Activity #3:  
First Draft of Final paper**

**Assignment Instructions:** Please write a 5-6-page paper (12 point font, 1.5 spacing) plus reference detailing the patient's case history. Please discuss the symptoms of the case history and how they relate to the pathophysiology of the presented disease or syndrome. Students must include an abstract, a summary of the medical tests (laboratory and clinical tests) performed, and analysis of why the tests were performed. Students must also include a discussion of normal human physiology and how the disease the patient is presented with results in pathophysiology. Students must use primary scientific literature (scientific journals), include in-text citations and matching references formatted in a standard scientific journal or American Psychological Association (APA) style.

**(Writing topics: organization/transitions, section headers, writing an abstract)**

**Points Earned Comments**

	<b>Points</b>	<b>Earned</b>	<b>Comments</b>
<p><b>Abstract:</b>  <b>2-3 sentences describing background information</b>  <b>2-3 sentences discussing the important clinical and laboratory results</b>  <b>2-3 sentences discussing the patient's diagnosis</b>  <b>2-3 sentences discussing the patient's prognosis</b></p>	<b>2</b>		
<p><b>Introduction (1-1.5 pages)</b>  Describe the patient's history and how they presented to the medical facility  Describe the patient's lab and clinical testing results and why they are important in diagnosing the disease or syndrome</p>	<b>3</b>		
<p><b>Differential Diagnosis (1.5-2 pages)</b>  Briefly describe at least 2 other diseases or syndromes that may lead to a similar clinical presentation  Describe how you arrived at the given diagnosis based on the patient's history and laboratory and test results and offer rationale for why your diagnosis is different than the two other possibilities outlined above</p>	<b>3</b>		
<p><b>Pathophysiology versus</b></p>	<b>3</b>		

<p><b>normal physiology (1 page)</b>  Compare the pathophysiology to normal physiology in the patient.</p> <p>Describe normal physiology of affected systems and the pathophysiology associated with the disease or syndrome.  How does the pathophysiology affect other body systems?</p>			
<p><b>Summary (0.5-1page) :</b>  Review the key clinical findings  State the diagnosis based on the clinical findings  Review the short-term and long term prognosis</p>	1		
<p>Citations and References (must be formatted in APA style or in an acceptable published journal format)  Effective paraphrasing- no quotes.  Include in-text citations  Include a formatted reference page</p>	1
