This Syllabus is brought to you for free and open access by the Course Syllabi at ScholarWorks at University of Montana. It has been accepted for inclusion in Syllabi by an authorized administrator of ScholarWorks at University of Montana. For more information, please contact scholarworks@mso.umt.edu.
Course Syllabus
CS 441 Theory and Practice Advanced Programming

PREREQUISITE: CS 335, CS 344, CS 346, CS 365 and Math 325 or consent of instructor.

COURSE OBJECTIVES:
This is your capstone sequence in the Computer Science Department and therefore this course will extend and deepen your understanding of topics previously covered. Specifically the objectives of this course are to gain an understanding of regular and context free languages, and language processing. You will examine and implement advanced data structures, algorithms, and programming techniques. You will understand design tradeoffs, software testing, maintenance and documentation issues, and program execution and memory requirements. Issues specific to graphical user interfaces and real-time systems will also be covered. All these issues will serve as the basis for a major project in CS 442.

INSTRUCTOR:
Name: Joel Henry
Office: Social Sciences 411
Office Hours: MWF 9-10; Tues & Thurs 1-2 If the door is open I am available
E-mail address: henryj@cs.umt.edu
Phone: 243-2218

TOPICS:
I. Introductory programming issues.
II. Languages and language processing.
III. Implementation issues.
IV. Compilation and linking issues.
V. Software design issues.
VI. Software testing, maintenance and documentation issues.
VII. Real-time systems, data compression, multithreading/signaling.
VIII. Preparing for a major project.

TEXTS:
REQUIRED: Compiler Construction, Louden
RECOMMENDED: Code Complete, McConnell ($28 from Amazon)

COURSE CONTENT:
I have changed this course from the material previously taught by Dr. Ford. These changes are to make this course the best course I can possibly provide to you. I will be using material from the Louden text but supplementing course materials heavily from other texts, journal articles, and personal experience. Course materials from other sources will be given to you or you can obtain them from the WWW or from reserve at the library. Please note: You may use Java or C++ in this course, and I have extensive professional computing experience which will influence this course heavily. You will not find this information in any textbook so COME TO CLASS!
Computer Science 441 - Syllabus

COURSE DELIVERABLES:
Tests (3 @ 20% each): 60%
Assignments (7): 40%

GRADING:
Grading scale: 59.5 or lower F, 59.6-69.5 D, 69.6-79.5 C, 79.6-89.5 B, 89.6 – 100 A

LATE POLICY:
Hand in materials: Presentations:
1 day (24 hours) - 10% No late presentations.
2 days (48 hours) - 30%
3 days (72 hours) - 50%
4 days or more - No thanks, I don’t want it.

CHEATING:
Plagiarism will be handled harshly, as per the Student Conduct Code. You may fail the assignment or the course. MY ADVICE: Take an F rather than cheat.

COURSE INFORMATION:
This course has changed to take advantage of the strengths of the instructor and to provide course materials that meet the vision of the instructor. In short, I asked myself, “What materials would have been most useful me in a capstone course prior to graduation?” This course answers that question.

You have never had me for a course and so have no stories from other students to rely on. Here is a cliff notes version of what you might hear if you were to talk to former students of mine. I am tough but fair. I have little tolerance for trash handed to me disguised as coursework. “The dog ate my homework” stories do not fly. If you have a legitimate problem or obstacle to submitting assignments or taking tests, I will go the extra mile to help you. I am informal in dress and presentation. Do not let this belie the fact that I take this job and this material very seriously. You will work hard but I will be working hard along side you to provide challenging, interesting, and relevant materials. I make mistakes and have no problem admitting them. However, I am bright and experienced and will not tolerate any disrespect. I will not disrespect you.

I firmly believe you can succeed in this course, can complete every assignment, and can master every test question. I believe you will meet my high expectations. If you are working hard at this course, I will do all I can to insure you get the grade you wish. If you attempting to do as little as possible to succeed, or just plain being lazy, you will find me indifferent to your success.

Come to class on time, just as you would if working for a prospective employer. If I am talking you are not talking. This is also a behavior I get upset with very quickly. If you want to chat, don’t come to class. If you are talking when I am, you will get to leave.
# Computer Science 441 - Syllabus

## Tentative Schedule:

<table>
<thead>
<tr>
<th>Week</th>
