**Course Objective: Learn to think like a Geographer!**

Students in this introductory course in Human Geography will be introduced to 'how geographers think'. Students will reach into the toolbox of geographers and actively learn about *regions and mapping, diffusion and migration, population growth and development, urban and cultural geography*. Basic tools and supplies of geographers are maps, spreadsheets, data sets, and computers. Active learning will be promoted through a series of computerized and non-computerized assignments. By employing geographic tools to actively learn about geographic concepts students will gain an understanding of Geography as a systematic discipline(—it is not about places on a map!) and why well-educated geographers find meaningful jobs. This class should also improve students' problem-solving skills.

Note: Several class sessions will be held in CIS computer labs and in the Mansfield Library.
