This Syllabus is brought to you for free and open access by the Course Syllabi at ScholarWorks at University of Montana. It has been accepted for inclusion in Syllabi by an authorized administrator of ScholarWorks at University of Montana. For more information, please contact scholarworks@mso.umt.edu.
Information Sheet: Math 221 Applied Linear Algebra, Fall 2000

Catalog Description: U 221 Linear Algebra 4 cr. Offered autumn and spring. Prereq., MATH 153. Vectors in the plane and space, systems of linear equations and Gauss-Jordan elimination, matrices, determinants, eigenvalues and eigenvectors, vector spaces, linear transformations. Calculators and/or computers used where appropriate.

Teacher: Greg St. George Office: Math 205a Phone: 243-4146 e-mail: stgeorge@selway
Office Hours Monday 10, Tuesday 3, Friday 2, Available in Corbin Lab: Friday 10, 3
Also: Molly Shulte is available M 12 and T 12 in Corbin 367
Text: Seymour Lipschutz, Linear Algebra. 2nd Ed. Shaum’s Outline Series. This text will mostly serve as a source of practice problems.

Important Dates:
25 Sept. Last Day to Add/Drop using Dial-a-Bear. Last day to Pay Fees. Last day to receive full refund for drops.
16 Oct. Last day to drop using drop/add form. After this drops will appear on transcript (WP or WF) and a fee will be assessed. Last day to change grading options.
7 Nov. Election Day (No Class)
10 Nov. Veteran’s Day (No Class)
22-24 Nov. Thanksgiving Vacation

Topics: In no particular order, we will probably cover:

V ectors in \( \mathbb{R}^n \): Orthogonality, Inner products and Length, Projections, Subspaces, Gramm-Schmidt.
M atrices: Introduced as Maps (see below). Operations, Applications, Determinants
L inear Maps \( \mathbb{R}^n \rightarrow \mathbb{R}^m \): Kernel and Range spaces and their dimension, “transpose maps”
V ector Spaces: Dependence, Independence, Bases.
E igenvalues: Eigenvectors, Symmetric Matrices.

Depending on time constraints, we may also cover Singular Value Decompositions.

Grading: This will be based on Problem Sets (that is, graded homework), Quizzes, Tests, and a Final. Each of these will have a specified point value, with Tests usually being 100 and the Final usually being 150-175. The grading scale is

\[ [90, \infty) \rightarrow A \quad [80,90) \rightarrow B \quad [67,80) \rightarrow C \quad [55,67) \rightarrow D \quad (-\infty,55) \rightarrow F \]

The instructor reserves the right to elevate grades based on exceptional performance on the final.

Software A scientific calculator is helpful. We will be introduced, briefly, to the software MATLAB during the course.

On reserve:
Halmos, Paul, Finite Dimensional Vector Spaces
Lang, Serge, Linear Algebra
Marcus, Marvin, and Minc Henryk, Elementary Linear Algebra
Strang, Gilbert, Linear Algebra and its Applications
Zelinsky, Daniel, A First Course in Linear Algebra
