**Math 691 Research Methods in Mathematics Education**  
**Fall Semester, 2000 Wednesday 4:10-7:00; 3 credits (graduate only)**  
**Math Building Rm. 305**  
**Johnny W. Lott**

**Description:** Prerequisite: Consent of Instructor. Resources for learning of reported research, critical reviews of research, quantitative and qualitative processes.

**Rationale:** Mathematics Education requires research involving institutions, classrooms, and students at all levels, from early childhood to graduate education. A variety of research paradigms are used with different demands on data collection and analysis. This course would complement student needs in statistics, but is not intended to replace any preparation in statistics for the Ph. D. candidates. The exploration of research paradigms is a critical step in a student's selection of appropriate methodology for a research proposal.

**Text:** Kelly, A., and R. Lesh (eds.). *Research Design in Mathematics and Science Education*. Mahwah, NJ: Lawrence Earlbaum Associates Publishing, 2000.

**Note:** Text is available from Lott at a cost of \$80.00. It was ordered by the Department through convention rates to save money. Make checks payable to Department of Mathematical Sciences.

**Outline:** The course will be taught by examining research of the following types:

- Weeks 1-2: Traditional research paradigms to include design and analysis of experiments, and quantitative studies. Handout of Campbell and Stanley will be used for the first two weeks.
- Weeks 3-4: Problems, Instruments, Methods, Kelly and Lesh—pgs. 9-190  
Qualitative versus Quantitative Research; supplemental readings  
Wang pgs. 103-117.
- Weeks 5-6: Teaching Experiments, Kelly and Lesh—pgs. 191-360  
Supplemental readings to include systemic research projects
- Weeks 7-8: Classroom Based Research, Kelly and Lesh—pgs. 361-512  
Supplemental reading include classroom interactions and ethnography
- Weeks 9-10: Clinical Methods, Kelly and Lesh—pgs. 513-732  
Supplemental readings include clinical interviews
- Weeks 11-12: Curriculum Design as Research, Kelly and Lesh—pgs. 733-814  
Supplemental readings from SIMMS as an example
- Weeks 13-15: Assessment Design, Kelly and Lesh—pgs. 815-926

**Evaluation:**

1. Class contributions—discussions in class (10%)
2. Written assignments—Short paragraphs about research reviewed and submitted by email. (20%)
3. Research presentations—Made in class to exemplify a design or a research issue (20%)
4. Mini-research proposal—Required for each on an area of interest. For doctoral students, this may be either a preliminary proposal for a dissertation, or the actual proposal. For others, this is negotiable as to what it covers. (30%)
5. Take-home final examination—The plan is to give you a research project or article and to have you critique it exemplifying what you have learned in the semester. (20%)

A major portion of the course will be devoted to analyzing research in the following journals.

*Educational Researcher*

*Educational Studies in Mathematics*

*International Journal of Mathematical Education in Science and Technology*

*Investigations in Mathematics*

*Journal for Research in Mathematics Education*.

*Journal of Mathematical Behavior*

*For the Learning of Mathematics*

Selected articles from the following journals will also be examined.

*Cognition and Instruction*

*Cognitive Science*

*Educational Psychologist*

*Instructional Science*

*Review of Educational Research*
