# UM council seat ruled illegal

By Ace Ramel  
Kaimin Contributing Reporter

The Missoula City Council's Judicial Review Committee determined yesterday that having an ex-officio — non-voting — University of Montana student sit in on council meetings and participate in floor debate would violate state and constitutional law.

Instead of having an ex-officio council member, the committee and ASUM President Steve Spaulding decided to set up a program in which the university

can participate in the council through an officially recognized student representative.

Mayor Bill Clegg, who had earlier expressed approval for a student ex-officio council member in conversation with Spaulding, apologized to Spaulding after the committee meeting for not first checking the legality of the proposal.

Spaulding said after the committee meeting that the only difference between his original proposal and the committee's decision is that the student representative will not be able to

participate in actual floor debate during council meetings.

Committee Chairman Ken Lousen said Spaulding should draft a "basic memorandum of understanding" explaining the role of the student representative and present it to the committee for approval.

Spaulding and the committee agreed that the student representative would be able to:

- attend the council meetings.
- request to speak at

## CB approves new member; allocates money to Kaimin

By Karen McGrath  
Kaimin Reporter

ASUM's Central Board approved Tom Hartman to fill a vacated Central Board position last night, but not without some controversy.

ASUM Vice President Eric Johnson said that he was notified by "various persons" that Hartman, a junior in philosophy, was a shoe-in for the CB position.

Johnson also said he knew that Hartman had withdrawn his application for the position, but reapplied when convinced by others that it would be wise to do so.

Johnson said he was out of town during the entire interview process and that he was worried that "maybe somebody is stacking CB."

ASUM President Steve Spaulding, who nominated Hartman for the position, said he wanted "to remind everyone that Eric is backing somebody else up," other than Hartman for the position.

"That was a cold shot," Johnson said to Spaulding.

Interviews for the position were conducted by Spaulding. He had also announced to CB the specific times the interviews would take place. They were open to anyone who wanted to attend.

When Hartman was asked by CB members why he withdrew his application, he said he felt that he wasn't adequate for the job.

Hartman added, however, that he reapplied when encouraged by various CB members who thought he could do the job.

CB finally approved Hartman's nomination. Tom Agamenoni, Paul Kettenring and Johnson abstained from voting.

In other business, CB allocated \$250 to the Montana

Kaimin to send a reporter to the special legislative session in Helena in November.

Some CB members questioned whether the Kaimin should receive the money because it is now running a surplus from advertising revenue.

## Disarmament needed for peaceful world

The United States' only interest in the United Nations is to score points in the U.N. Security Council, according to peace and civil rights activist Kay Camp.

The former national president of the Women's International League for Peace and Freedom spoke to an audience of 50 in the University Center Lounge last night. The speech was sponsored by the Student Action Center, Missoula Women for Peace, the Women's Resource Center and Montanans for Peace in El Salvador.

While the United Nations should be "central in our foreign policy," Camp asserted, the United States is not interested in the disarmament strategies it offers.

The focus of the world and the United States should be on the U.N. Second Special Session on Disarmament on June 7, 1982, Camp said.

Camp was a special adviser to

the U.S. delegation to the first special session on disarmament, and guessed that this session will discuss weapons treaties, possible disarmament agreements and many other topics.

Camp warned that in this interdependent world where there are not agreements that cannot and will not be broken, "no nation can guarantee its own security."

She said that peace is the only security, and disarmament is one aspect of peace.

Camp offered three choices the United States could make to slow down, if not halt, the arms race.

The United States:

- should join seriously with the United Nations.
- could enter into a bilateral disarmament agreement with the Soviet Union.
- could begin its own disarmament process.

## Senate approves sale of AWACS to Arabs

WASHINGTON (AP) — The Senate approved President Ronald Reagan's record \$8.5-billion AWACS sale to Saudi Arabia yesterday, crowning an intensive lobbying effort that reversed long odds and delivered a stunning victory in Reagan's first major foreign policy test.

The package involved not only the sale of five Airborne Warning and Control Systems radar planes (AWACS) to Saudi Arabia, but also 1,177 Sidewinder missiles, 101 fuel pods and six flying tankers to stretch the range and firepower of F-15 jets already in possession of the Arab kingdom.

The Senate rejected 52-48 a veto resolution that would have scrapped the sale of the sophisticated radar planes and F-15 jetfighter weaponry to the Arab kingdom.

The House voted 301-111 against the package two weeks ago, and, as late as Tuesday,

Senate opponents remained confident that they had more than enough support to do the same.

But Reagan's personal powers of persuasion turned the vote his

way at the showdown.

Earlier, the president told the Senate, in a letter, that the sale is invaluable to U.S. security interests "by improving both our

strategic posture and the prospects for peace in the Middle East."

But opponents called it a threat to the security of Israel,

fuel for a Middle East arms race and a risk of losing secret AWACS and advanced military technology to the Soviets, or to radical Arab nations if the Saudi government is overthrown.

Hours before the vote, Reagan declared in a letter to the Senate that the sale of AWACS radar planes and the jet fighters are no threat to Israel and that Americans will be involved in the Saudi operations "well into the 1990s."

The president's letter said he would seek "the substantial assistance of Saudi Arabia" in Middle East peace efforts and said Americans will have the right to continually inspect both "air and ground security arrangements for all equipment."

Under provisions of the proposed sale, the Saudis would receive five AWACS in 1985, but

## AWACS most advanced in world

WASHINGTON (AP) — The AWACS radar planes are rated the world's most sophisticated machines of their kind.

But the five AWACS models the Reagan administration has promised to sell Saudi Arabia would be delivered without several key electronic systems that the U.S. military has classified as too sensitive to be allowed out of American hands.

These systems are mainly advanced jam-resistant communications devices used to send commands to jet fighters defending friendly airspace against hostile bombers and other enemy warplanes.

The Saudi Airborne Warning and Control Systems jets would be furnished with less effective communications gear, officials say.

But one Air Force general told reporters last April that "we would be very upset if, say, the Soviets suddenly got their hands on AWACS." The general declined to be identified.

Air Force officials say the Soviets now have a type of AWACS which is less capable than the U.S. version. The Soviets are said to be working on a second generation AWACS that is expected to be in operation in about two years.

"We believe it will have comparable technology with ours," said a general, who spoke anonymously.

The most important feature of the \$127 million U.S. AWACS is radar that can look down and separate the images of aircraft from ground "clutter" reflected from the earth's surface.

This means that even very low-flying bombers or other attacking aircraft could not elude detection, as they can now, by flying below the search beams generated by radar stations on the ground.

Another major feature of the AWACS is that, while identifying and tracking enemy jets, it can

MACPAC plays dangerous game

The Missoula Area Citizens Political Action Committee is a shadowy danger in Missoula. It is evidence of a growing national trend to hand over our world to corporate interests at the expense of health, a pleasant environment and esthetics.

MACPAC is dangerous.

Although it endorsed nine candidates in the September primary, only four have made it this far and with good reason. MACPAC's intent is to endorse candidates whose views most mirror its own philosophies: to change the political climate on City Council to one favoring the growth of business in Missoula.

MACPAC members apparently feel that Missoula is in danger of dying, and a pro-business attitude could save the city from self-destruction.

A rather pertinent question, however, is save Missoula at what expense?

A selling point used to promote Missoula as a desirable location in which to locate and relocate businesses essentially is the city's beauty. This truth is evident to residents and certainly is a valid selling point. But to retain it as a truth, we must judge whether it is in our best interests now and in the future to compromise that beauty with uninhibited, careless growth. Do huge billboards really enhance our city's fabulous mountain backdrop?

MACPAC's most repeated charge is that the City Council has demonstrated an anti-business attitude, and the time has come to correct it.

However, such a perception is simply the paranoia of businessmen who are feeling the crunch of the times and blaming tighter consumer budgets and reduced buying on an anti-business attitude.

MACPAC also claims it will provide the "necessities of life" to Missoulians. However, a concrete definition of the necessities of life is missing, and in fact such an intention rings ominously of the Moral Majority. Are not clean air, guided — and guarded — growth and sensible social and service improvements, all of which this council has worked hard to provide, necessities of life? Of course money helps, and MACPAC feels that increased business growth is therefore justified. However, Missoulians know that there is more to living here than new shopping malls and condominiums.

Business — appropriate, clean business — should be encouraged for Missoula. But a more responsible way to promote that end is to help the small businesses that have been an integral part of Missoula's pulse and history. By extending tax credits to existing small businesses, what is here now can be saved and nurtured.

MACPAC is dangerous. Study its actions and the candidates it endorses this election — mayoral candidate John Hamp, and council candidates Janell Hopkins (Ward 3), Tim Hubbard (Ward 5) and Frank LePaine (Ward 6). Determine whether their perception of what is in the best interests for Missoula is what we really need.

Irony in Cancun

Editor: It is ironic, to put it mildly, that those countries which lived or are still living on international exploitation are the most fervent opponents of aid to the developing countries.

Britain's moribund glory was a result of her unmitigated and shameless exploitation of Africa, Asia, and the Caribbean. Margaret Thatcher has forgotten that most of the economic and political mess in Africa today is a direct British legacy. Before his departure to Cancun, Mexico, President Reagan served notice that he would stonewall any consensus on massive aid to the poor countries. He went on to admonish the poor countries to recognize the "magic of the marketplace." It is obvious that most of the developing countries and even some of the big powers in Europe have lost confidence in this "magic." They are not oblivious to the fact that this "magic" has produced nothing but a chasm between starving poverty and insolence of fattening wealth. This "magic" has kept some people rich at the expense of others, and has kept some nations rich at the expense of other nations. The "magic" is a predatory economic system. It has produced over fifty percent unemployment among black teenagers in the U.S., runaway inflation, and uncomfortable swings in the economy. I totally agree with the foreign minister

of Nigeria, who said at the Cancun conference that this "magic" has operated in the United States because of the availability of cheap black labour, i.e. slavery, a dehumanizing exploitation that is an anthem in Africa. With the growing skepticism about the "magic" as exemplified in France and recently in Greece, it is time that the advocates and disciples of this "magic" realized that all these happenings are not temporary inconveniences but ominous intimations of the future. The real calculus of American strength should not be expressed primarily in terms of willingness to fight or the number of missiles and warheads. It should not be expressed as how tough Americans can be with the Soviets or anybody else. It must be an expression of how ready Americans are to accept and adjust to inevitable changes as they develop.

To Kaimin intellect

Editor: (Dedicated to Karen McGrath — vintage Oct. 22 — and to Kaimin intellect.) Billy Candidate, Central Board member, cartwheeled through the autumn leaves nestled along the bases of the sturdy maple trees. "God, that felt good," he exclaimed. "And it shows what an intellectual sophisticate I am."

Billy's best friend, Ajax Greer, another CB member, was hanging by one leg from a branch of a spindly white birch. "That Billy's a funny guy," he said.

Billy and Ajax are both funny guys. They are involved in the women's and anti-nuclear

movements, and they are currently combating CB apathy. These two have energy to burn.

They met in the streets of San Francisco in the fall of 1978, and have been pals ever since. Billy, 25, a dance major from Thunderhigh, N.J., says of himself, "I'm Jersey-born and Jersey-bred and when I die I'll be Jersey-dead." Ajax, 21, is a freshman in general studies and says he plans to breeze through life, hanging from trees and watching Billy perform acrobatics.

Coot Pooner is a friend of Billy and Ajax. He says of them: "Those guys are just about the greatest human beings on the face of the earth. I love 'em like brothers. I wish the entire world was made up of guys like them. I also wish donuts didn't have those funny holes. Why is that?"

Billy and Ajax agree with Coot. They both say they're great guys, but they also say the rest of the world has problems. "The big problem in our society today and especially on this campus," Billy says, "is people over-using the language to the point of verbosity and repeatedly repeated redundancies and duplication."

Now Billy is doing somersaults in the grass. Ajax is hanging by his teeth from the same branch as before. Suddenly Billy springs to his feet. "Come on, Ajax!" he shouts to his dangling buddy. "Let's go have fun somewhere else for awhile." They clasp hands and trot together into the receding sun.

An observer, listening closely to their departure, might have heard Billy say: "Ajax, whaddaya say we make this world better for all mankind? Whaddaya say we put an end to all the problems? Whaddaya say we start tomorrow?"

## Careful, drivers

**Editor:** Due to the recent accidents and near misses of Missoula area students walking and bicycling to and from school, we are asking your assistance in reminding Missoula motorists to be particularly attentive to pedestrians.

We are particularly concerned about motorist awareness as we are approaching the time change and as winter driving is doubly dangerous.

May the following serve to suggest material for your announcements for motorists as well as motorist-parents:

- Identify crosswalks and crossing areas that are on their regular route to and from work.

- Urge more cautious driving when they see little people alongside the road.

- Remind drivers that it takes 55 feet to come to a complete stop when traveling at 20 m.p.m.

- Remove foot from the accelerator and be prepared to stop when they see a child by the curb at a crosswalk—children are unpredictable.

- Have parents select the safest route for their children to walk to and from school and make sure their children are using identified painted crosswalks.

- Have children wear light-colored outer clothing—reflective tapes are available.

Missoula parents, School District No. 1 and the City Engineers Officer have identified several "hot spots." Information concerning these areas may be obtained from the City Engineer's Office.

Whatever you can do to assist us in insuring that no Missoula child is killed or injured by a motorist will be greatly appreciated.

Missoula

## And Now the Washakie

**Editor:** Environmentalists recently celebrated the supposed victory in the battle to "save" the Bob Marshall country in western Montana. Though not finished by any means, this battle looks like a gain for the people and a loss for the energy giants.

On the heels of this battle comes another environmental

showdown, in Wyoming's Washakie Wilderness. It is basically the same issue: a rugged and pristine wilderness area, half a million acres in size, that just happens to lie on the Overthrust Belt. The Washakie, with Yellowstone Park as its western neighbor, is a vital part of one of our largest concentrations of designated wilderness in the 48 states. The Washakie, and its surrounding wilds, are prime wildlife habitat, and offer unmatched wilderness recreation opportunities.

The Overthrust Belt undoubtedly shows promise for oil and gas development. Most of it by far is non-wilderness land, upon which exploration, leasing, and development will probably occur. The question is, however, do we really need to spoil our last, and greatest, areas of wilderness for a few weeks worth of oil and gas? Will the benefits equal the costs?

The Bob Marshall was "saved" because the people spoke their opposition, and our congressmen heard us. The Washakie, to date, has no such heroes. Wyoming's congressional delegation is overwhelmingly anti-wilderness. They favor oil and gas exploration and leasing in designated wilderness. They favor extending the 1984 mineral leasing deadline laid out in the Wilderness Act of 1964.

The Washakie Wilderness doesn't have the fame of the Bob Marshall, nor the large number of concerned local citizens. If exploration and leasing are allowed there, our other wilderness areas will be next.

I must admit that I've never been to the Washakie. I had barely even heard of it before this summer. Hopefully I will visit the area someday and I do not want my "wilderness experience" threatened or spoiled for a piddly amount of oil.

What wilderness we have now is all we will ever have. The Lord

isn't making any more of it. If we are to save some places for our future and our children, we must speak up now. Voice your opposition to ruining our National Wilderness Preservation System, and the Washakie. No development, no mineral leasing deadline extensions. Send a letter to: Mr. Ray Hall, Forest Supervisor, Shoshone National Forest, Cody, Wyoming, 82414, and to Mr. Craig Rupp, Regional Forester, U.S.F.S., 11177 W. 8th Ave., Box 25127, Lakewood, Colorado, 80225. Also please write your congressmen.

Tom Sewell  
senior, geography

## Please write

**Editor:** I am a prisoner on death row at the Arizona State Prison and I was wondering if you would do me a favor. I have been here for quite a while and I don't have any family or friends on the outside to write to so what I was wondering is if you could put an ad in your campus newspaper for me for correspondence. If not in your paper then maybe you have some kind of bulletin that you could put it in. I know that you are not a pen pal club or anything like that but I would really appreciate it if you could help me.

Since I don't know if you have an actual newspaper, I will just make a small ad and then if you have to change it around or anything go ahead and do what you need to.

Death Row prisoner, caucasian male, age 34, desires correspondence with either male or female college students. Wants to form some kind of friendly type relationship and more or less just exchange past experiences and ideas. Will answer all letters and exchange pictures. If interested write to: Jim Jeffers, Box B-38604, Florence, Arizona, 85232.

Jim Jeffers

## Wooksmoke is No. 1 pollutant

# New pollution stages are designed to inform residents of air quality

By Jim Marks  
Kaimin Reporter

Sniff the air. If it smells bad and seems to be gritty, then Missoula's chronic air pollution problem probably has lifted its ugly head once again.

Contrary to a common assumption that air pollution is caused by industry, the Missoula City/County Health Department air quality specialist, Scott Church, says that for the past six years, the majority of the foreign particulates in the air has been caused by city residents.

Church said in a recent interview that woodsmoke from stoves and fireplaces of city residents — not industrial waste — is the main source of Missoula's air pollution.

A new air pollution warning system has been developed by the City/County Health Department to help inform residents of air conditions. The new system has not been completely approved by the Montana State Health Department, but Church said he hopes approval will come by Nov. 1.

Air pollution is measured by a particulate count of micrograms per cubic meter of air. The particulates that make up a microgram vary in size. Smaller particulates are more dangerous to human health because the body cannot rid itself of small particles as readily as larger ones.

Woodsmoke particles from residential wood burning make up about 54 percent of the particulate count during winter, Church said. The smaller particles, he said, are dominated by about 75 percent woodsmoke

particles. Dust, industrial waste and transportation pollutants make up the rest of the particulate count.

These percentages indicate that city residents must all try to help reduce the air pollution problem, he said.

"We have to recognize and admit that we ourselves are the problem," he said. "We have to cooperate to cure the problem. It's as simple as that."

The new plan differs from the previous plan in that the acceptable particulate levels within the four public warning stages have changed. It is designed to match the state emergency plan and to give residents a chance to take precautions against air pollution by reducing particulate levels in the first public warning stage, Church said.

Residents who do not cease wood burning during stages two through four may be fined up to \$50. However, those who use wood burning as a primary heat source are exempt from the fine.

Church said that during the stage two warning, offenders will be warned before being fined. Along with the warning, they will be given pamphlets explaining the air pollution problem, he said, adding that tickets will be issued to those who do not heed the warning after about two hours.

"We're not out to be big government or Big Brother," he said, explaining that the health department just wants to remedy the potential health danger caused by air pollution.

The four public warning stages of the new system are as follows:

- Stage one alert — 150 micrograms per cubic meter.

Residents are requested to stop wood burning and to use mass transit systems. There is no mandatory fine.

- State two warning — 300 micrograms per cubic meter. Pollution becomes visible to the eye. Mandatory fines can be issued to residents who do not comply with requests to stop burning wood.

- Stage three — emergency — 625 micrograms per cubic meter. Being outside is dangerous.

- Stage four — crisis — 875 micrograms per cubic meter. The crisis stage signifies a disaster.

In the previous plan, the four consecutive warning stages' particulate levels were 200, 260, 375 and 625 micrograms per cubic meter.

Missoula's air pollution problem is heightened by a phenomenon common to mountainous areas — air inversion. Cold air trapped by warm air holds the polluting emissions in the valley while keeping fresh air out.

Cold air replaces the warm air in a valley when mountainsides cool as the sun goes down. The denser cold air forces the warm air up as it collects in the valley. The cold air will become stagnant unless the sun warms it, the wind blows the inversion away or rain washes it away.

Church said Missoula's air pollution problem varies with changing meteorological conditions and time of year.

The highest particulate count recorded in Missoula County was during the ash fallout from Mount St. Helens' eruption May 18, 1980. At the worst time during that crisis, 20,000 micrograms per cubic meter contaminated Missoula's air.

For daily information on air quality conditions, call the air Pollution Hot Line at 728-2473.

# University precinct shows history of low voter turnout

By Edwin Bender  
Kaimin Contributing Reporter

In the past three city elections, Precinct 52, which is the University of Montana, has had the poorest turnout of registered voters in Missoula.

Because of this, candidates for public office can expect to receive only a fraction of the votes of the 829 registered voters now living in the dorms.

ASUM President Steve Spaulding said he thought the low student turnout was because many are just getting out of high school and are not familiar with the process of registering and voting.

"The campus is a world within another world," he said. "Students aren't exposed to issues like everyone else."

Spaulding said most students just read the Kaimin or the Clark Fork Free Press and haven't been exposed to city issues.

The three city elections with low turnout are:

- the April 1979 general election — of 1839 registered voters, only 11 percent or 205 people voted.

- the April 1977 general election — of 890 registered voters, only 7 percent or 71 people voted.

- the April 1975 general election — of 1054 registered voters, only 18 percent or 196 people voted.

Lois Herbig, Ward 1 councilwoman who is running unopposed to verify her appointed status on the council, said she thinks students are not as aware of local issues as they are of national issues.

"I think that they have a feeling of hopelessness," she said. "I think they don't feel they're going to do any good."

The students of the 60s felt their actions would do some good, she said, adding that students today feel that local issues are of little significance compared to national and international issues.

Cass Chinske, a Ward 1 councilman running unopposed, said much the same as Herbig.

He said he remembers how students who were active in the 60s became apathetic after a few years.

"I'm seeing the whole thing again," he said.

Herbig said it is difficult to talk with students in the dorms because it takes so much time, but added that she would like to see some sort of meeting between students and candidates established in the future.

Mayor Bill Cregg, the only candidate to advertise in student

publications, said that it is a candidate's responsibility to try to get students involved in city government.

Cregg said he has spent about

limited to city elections, however.

In the 1980 presidential election, 38 percent of the registered voters on campus turned out.

\$180 for advertising in the Kaimin, the Clark Fork Free Press and for some signs on campus.

The low student turnout isn't

And in the 1976 presidential election 47 percent turned out. Both percentages were much lower than the average turnout in Missoula.

## news brief

By the Associated Press

### Poland committee considers ban on strikes

Millions of Polish workers staged a one-hour national strike yesterday, after which Communist Party Chief Wojciech Jaruzelski said that the protests must stop.

Addressing the Polish Central Committee, Jaruzelski called the latest strike a "harassing . . . destructive" failure that was part of a pattern that shows itself whenever the "party regains strength."

The Central Committee met to consider "changes in structure and functioning" of the party machinery and a ban on strikes, the official Polish news agency PAP said.

# UM to join international monitoring of variable star

By Pam Newbern  
Kaimin Reporter

The University of Montana's astronomy department is helping to organize an international research program next summer to monitor brightness changes in a variable star.

Thomas Margrave, associate professor of physics and astronomy, said the purpose of the research project is to gain an overall look at one variable star, called BW Vulpeculae, which has not been adequately charted.

"The brightness of a variable star does not remain constant, like that of other stars," Margrave said, "but brightens and dims according to a cycle."

The brightness of BW Vulpeculae varies from cycle to cycle in a 24-hour period. This

makes it impossible for one astronomer to look at all the cycles of the star, since it can be observed only at night.

Margrave said about 20 astronomers from eight or nine different countries, including Poland, Italy, Spain, Mexico, Japan and the United States, have agreed to participate in the project.

"We hope to get as many as 30 (observers) from 12 different countries," Margrave said. "We expect to start in July of 1982, and then look at the star intensively from September 10 to September 24."

Margrave said the idea for an international research project started when he and several other astronomers, including Chris Sterken of Belgium and Michael Snowden of San Diego, Calif., started corresponding.

Communication has not been a problem between international astronomers, Margrave said, because most astronomers know English.

When all the data has been

THOMAS MARGRAVE

compiled from the various researchers, he said, the results will be published jointly in an international journal.

This star has never been charted before, Margrave said, adding, "I think it will be very exciting to see how it works out."

The cost of the university's part in the research will be about \$2,000, Margrave said.

"We have to lease a vehicle to get out to the telescope on Blue Mountain, which costs about \$275 per month," Margrave said. "We also have to buy gas to get there and back, which is a round trip of about 40 miles. There is also the cost of computer time to reduce and plot the data that we get."

Margrave said he feels the university has the opportunity to participate in an international event at a very low cost.

"The university gets publicity for having participated in the event," Margrave said, "and that shows that astronomy is being done even in a rather isolated area. I think the project may create an increased interest in astronomy and mutual cooperation between nations."

## Taking in a show needn't cost big bucks

By Karla Burnett  
Kaimin Contributing Reporter

Dear Mom and Dad, please send money. Love, your favorite son, John.

Look familiar? Entertainment costs for college students often exceed their budgets.

If you're feeling the need to save money but don't want to sacrifice entertainment, how about ushering one of the numerous campus productions and seeing the show for free?

The University of Montana drama/dance department and ASUM use ushers for most of their events—events which cost the public between \$1.50 and \$15 a ticket.

The drama department needs ushers for two productions this quarter. The usher sign-up sheet is posted opposite Fine Arts 211 approximately one week before the opening night of each show. Select the date on which you'd

like to usher and show up at the designated time and place.

The dance department will have three productions this year. The usher sign-up sheet is posted in the dance department in the Women's Center about one week prior to performances.

ASUM-sponsored events include the Performing Arts Series and pop concerts. About two weeks before a performance, the sign-up lists are posted on the ASUM door in the University Center.

Working at pop concerts, however, requires more of the usher. Because these ushers are present essentially for security purposes, they must first go through a training session.

You might usher for 45 minutes to an hour, then when the show begins you may take any remaining seat or one in an area reserved for the ushers. After finishing your duty as usher, you are one of the crowd.

If this movie doesn't scare you to death, you may just die laughing!

## AWACS . . .

Cont. from p. 1

send these data to fighter-interceptors and direct them against the enemy targets. In addition to air defense, the AWACS system can control friendly forces in fighting for air superiority over a battle area and in directing close fighter bomber support of friendly ground forces.

The AWACS is equipped to "see" targets as distant as 200 miles when operating at its normal 29,000-foot altitude. From high altitude, experts say, it can detect large planes as far as

360 miles away.

The United States already has 24 AWACS aircraft. Four of them have been operating with U.S. crews in Saudi Arabia for some time, to guard against possible air attack by Iran or other hostile powers on Saudi Arabia's oilfields.

Two others were sent to Egypt recently, following the assassination of President Anwar Sadat, to help guard against Libyan air attack on that country and show U.S. support for the new Egyptian regime.

## Council . . .

Cont. from p. 1

meetings on issues pertinent to the university.

- give reports to the council on campus issues and activities.
- ask the council to initiate

legislation or other action.

- attend and participate freely in the council's committee activities.

- have access to the mayor's office, the council and the city staff.

Lousen said that after the

Judicial Review Committee approved a final version of Spaulding's memorandum outlining the student representative's duties it could be presented to the City Council with a recommendation for approval.

## CB . . .

Cont. from p. 1

son, who originally asked the ASUM budget and finance committee for \$500, said that the special session was anticipated by the Kaimin at budget time and that the Kaimin surplus will be needed for costs such as equipment.

Also, Mayor Bill Cregg briefly spoke to CB about placing a University of Montana student on city council in a non-voting position. (See related story on

page 1.)

CB also announced the forming of a coalition of students, faculty and staff who wish to work on the convocation on the

threat of nuclear war that will be held Nov. 11. A meeting will be held today in the ASUM conference room at the University Center at 5 p.m.

## Senate . . .

Cont. from p. 1

they would be models without advanced features such as jam-resistant communications devices.

### SURFER RUTH LADIES' NIGHT

One Free Drink for Each Lady  
2 for 1 Drinks 7-9

2200 STEPHENS AVENUE

### EARN OVER \$850 A MONTH RIGHT THROUGH YOUR SENIOR YEAR

If you're a junior or a senior majoring in math, physics, chemistry or engineering, the Navy has a program you should know about.

It's called the Nuclear Propulsion Officer Candidate-Collegiate Program (NUPOC-C for short) and if you qualify, you will receive a \$3000 Bonus immediately and earn as much as \$850 a month right through your senior year. Then after 16 weeks of Officer Candidate School, you'll receive an additional year of advanced technical education. This would cost you thousands in a civilian school, but in the Navy, we pay you. And at the end of the year of training, you'll receive another \$3,000 cash bonus.

It isn't easy. There are fewer than 300 openings and only one of every six applicants will be selected. But if you make it, you'll have qualified for an elite engineering training program, unequalled hands-on responsibility, a \$40,000 salary after four years, and outstanding qualifications for jobs in private industry should you decide to leave the Navy later.

Ask your placement officer to set up an interview with a Navy representative when he visits the campus on November 4-5, or contact your Navy representative at 206-442-5700 (collect). If you prefer, send your resume to the Navy Nuclear Officer Program, 300-120th Ave NE, Bldg. 1, Suite 200, Bellevue, WA 98005, and a Navy representative will contact you directly. The NUPOC-Collegiate Program. It can do more than help you finish college: it can lead to an exciting career opportunity.
