## Bucklew initiates planning system

By Bill Miller  
*Kaimin Reporter*

With future enrollment and financial resources declining, University of Montana President Neil Bucklew has decided to implement a comprehensive planning process for UM. This process may help prepare all UM departments to continue operation in the face of federal funding cutbacks.

UM Academic Vice President Donald Habbe said that the first draft of a document for this process will be ready next week, and the university community will begin using it this spring to start planning for the 1982-83 academic school year.

Habbe, who will act for Bucklew as coordinator of the planning process, said that a new system was needed because of declining resources and because the internal allocations of those resources are being controlled by outside parties. As an example, he cited UM's utility bill, which has more than doubled from \$824,629 in 1979-80 to \$1,518,444 in 1981-82.

"Because of those kind of developments, a planning process that looks at everything rather than looking at a part is needed," Habbe said. "There have been various forms of planning (at UM in the past), but this is the first comprehensive process for all elements of the university."

Habbe said that in the past, planning for all departments was fragmented. For example, department heads for academics, the Physical Plant and development all made separate budget requests directly to the president.

The new process will be operated by three parties — Bucklew, the University Planning Council (UPC), and planning units. Planning units are comprised of the major academic and administrative units of the

university, such as the College of Arts and Sciences, the School of Education, the School of Law, Library Services, Athletics and ASUM.

Each unit is headed by an academic or administrative officer such as a dean or a director. It is the responsibility of these units to prepare statements of objectives, annual plans, program review reports and budget information and submit these statements to the UPC.

The UPC will serve as an advisory group to Bucklew on planning matters. This council, which is composed of UM faculty, staff and students, will evaluate the information given to them by the planning units, submit it to Bucklew and then help him make decisions regarding the information. Habbe said it is an important challenge to serve with the UPC and added that Bucklew has told council members that they should not be representatives of their constituencies. Instead, they should be responsible and have the ability to allocate and plan for the university as a whole, he said.

The faculty and staff UPC members are Tom Roy, associate professor in social work; David Weber, associate professor in accounting and finance; Harry Fritz, history professor; Howard Reinhardt, professor of mathematics; Ron Erickson, professor and director of the environmental studies program; Phil Hess, professor and chairman of the radio and television department; James Todd, professor and chairman of the art department; Jerry Bromenshenk, entomologist in botany; Margaret Dooien, counselor at the Center for Student Development; Ben Stout, forestry dean; and Lynda Brown, director of Equal Opportunity and Personnel Services.

## Northern Tier permit denial recommended by council

By Gordon Gregory  
*Kaimin Reporter*

The Northern Tier Pipeline Co. received a potentially damaging blow yesterday when rejection of a key permit was recommended by the Washington Energy Facilities Site Evaluation Council.

The council voted 19-6 to recommend denial of the pipeline company's request for a permit to build an oil port and pipeline in the state. One council member abstained from voting.

The recommendation will formally be sent to Washington Gov. John Spellman sometime next week, Nicholas Lewis, chairman of the evaluation council, said.

The governor, who has repeatedly said he will follow the council's decision, will then have 60 days to approve or deny the permit.

Northern Tier wants to build a crude oil pipeline from Port Angeles, Wash., to Clearbrook, Minn. If built, the pipeline would cross the length of Montana and transport up to 933,000 barrels of Alaskan and foreign oil daily.

Yesterday's decision, which culminates a permit process that began in July 1976 and involved over 40,000 pages of written testimony and thousands of hours of hearings, was called "absolutely final" by Lewis.

He said, "there were very, very specific and sound reasons for the rejection."

Chief among these reasons, Lewis said, was the location of the oil port and the 18-mile-long section of the pipeline that would run under part of Puget Sound.

The potential for explosions and fires at the oil port that would be located at Port Angeles would cause too great a danger to the residents there, Lewis said. He added that the submarine pipeline would "cause very grave problems to the environment."

The decision was based on problems with the design of the project, not the project itself, Lewis said.

"By no means is this decision a rejection of the project by the state of Washington," Lewis said. "There are ways to solve the problems."

Asked if the solutions included moving the oil port and re-routing the pipeline, Lewis answered, "Those are possibilities, of course."

Jan Rappe, president of the Northern Tier Information Committee, a local group opposed to the pipeline, said, "We are very pleased with the decision."

"After a very thorough evaluation, it was shown that the pipeline proposal didn't have merit and would be detrimental to

Washington State and the nation as a whole. It was an excellent decision," Rappe said.

"For practically the first time, Northern Tier had to testify under oath and be cross-examined," he said. "It couldn't rely on its public relations people to paint a picture, and it just couldn't answer all the questions right."

"The big question now is," Rappe said, "will the federal government step in and override Washington's right to make its own decision?"

The federal government has consistently supported the proposal by Northern Tier, a consortium made up of Getty Oil, U.S. Steel, Burlington Northern, Westinghouse, CENEX farmer's cooperative and other firms.

Lewis said federal intervention would be a serious concern, but that the administration's support for states' rights may inhibit it from stepping in.

According to Neil Mork, a spokesman for the Bureau of Land Management's Billings office, which is coordinating much of the federal government's Northern Tier efforts, no federal law exists that allows for such intervention.

He said the only way the federal government could intervene would be to pass special legislation.

Mork said the legislation probably would not come from the administration, but from a congressman.

"There's a strong likelihood that a congressman from one of the Northern Tier states will attempt to initiate this action," he said.

Rappe said the prospect for some kind of federal intervention worries him. "It's a little frightening to any citizen group that has worked within the system and played by the rules, that politics might override the procedures designed to protect them," Rappe said.

## Copeland approved as business manager

By Sam Richards  
*Kaimin Reporter*

Mike Copeland, senior in economics, was approved by Central Board last night as new ASUM Business Manager.

Copeland took his seat on CB immediately after ratification. The vote to ratify Copeland was 13-3.

The vote came after CB heard members of the ASUM Budget and Finance Committee speak about the two top applicants for the business manager position.

The Budget and Finance Committee, which interviewed the five applicants, came out 3-1 in favor of appointing Andrew Matosich, sophomore in political science and accounting, as business manager.

Budget and Finance Com-

mittee member Greg Anderson, junior in history and journalism, said Matosich was chosen mainly because, other factors being equal, he had more time available to do the job.

CB delegate Frank Cote, senior in political science and the dissenting voter on the Budget and Finance Committee, said he won out over Matosich on two important criteria for choosing a business manager, with current and continuing relationship with ASUM being the most important. Cote added that Matosich and Copeland were determined equal on two other criteria by the Budget and Finance Committee, which gave Copeland the overall edge and rendered the time criterion irrelevant.

CB delegate Kent Spence, senior in finance, also said the time factor was unimportant, and

added that being business manager isn't "an all-week job."

ASUM Vice President Eric Johnson openly criticized Spaulding for wasting time and effort on interviewing and evaluating five applicants for business manager when, as Johnson said, Spaulding knew who he wanted as business manager all along.

Johnson said Spaulding told him Monday that he had made up his mind he wanted Copeland as business manager. Johnson also said that if Spaulding wanted him in from the start, that he could have used his presidential power to appoint him without CB ratification.

In other action, CB:

- heard from Brian Henderson, ASUM lectures coordinator, concerning CB's giving money to bring in guest lecturers. Financing lectures is normally Hender-

son's responsibility.

Henderson, a sophomore in accounting, explained that Programming doesn't have enough money to bring in all the guest speakers requested by University of Montana students and groups, and that instead of turning people away he will send them to CB to ask for money from the Special Allocations fund to get the lecturers.

- announced five appointees to the University Planning Council (see related story this page).

- gave Women's Resource Center \$593 for airplane fare to bring Gloria Steinem, founder of Ms. Magazine, to UM to speak. A date for Steinem's appearance has not been decided yet.

- gave the ASUM Elections Committee \$300 to cover operational and promotional costs for the 1982 ASUM general election in March.

## Nuclear power needs stricter regulation

It was on this day, almost three years ago, that an event took place that rocked a small Pennsylvania town. That event changed many of those people's lives and transformed the energy industry. The event? Three Mile Island.

On Monday another nuclear "accident" took place in a small New England town that approached the seriousness and potential danger of Three Mile Island. Radioactive steam and water escaped into the environment when a tube ruptured in a cooling system at the Ginna nuclear power plant in Ontario, N.Y., a plant operated by Rochester Gas & Electric Corp.

No injuries were reported, and officials were confident that no detrimental health effects could be expected. Officials also emphasized that there was no damage to the reactor's core.

Just another "minor" accident; something we should demurely accept as one of the throes of progress? Wrong.

But, for better or worse, nuclear-powered energy is here to stay for at least another 30 years. Too much research and money has gone into the nuclear industry for operators to turn to another energy source overnight. But as long as we must depend on nuclear energy, we must find a way to make sure we live with it, not in spite of it.

After Three Mile Island, the Nuclear Energy Commission vowed to keep a tighter rein on nuclear plants: more frequent inspections, stricter record-keeping, etc. But with Reagan's commitment to nuclear energy and his commitment to reduced regulatory interference, the nuclear industry again is in danger of putting us in danger.

The nuclear watchdog must be more aggressive in its regulatory duties. Nuclear energy powers American homes, but it is also an energy that can steal human life.

More money needs to be put into research and development of other energy sources. All too soon, nuclear power will become an energy dinosaur: too inefficient, unsafe and expensive to operate economically.

An even more critical eye must be turned on the nuclear industry. We cannot tolerate the harmful health effects, no matter how miniscule, of nuclear plants. We must keep an eye on the present with one eye to the future if we're to survive nuclear energy unscathed.

## Overstepping boundaries

Editor: I would like to address this letter to the Associated Students of the University of Montana.

Tonight (Jan. 20), Central Board members (elected by those of you who cared enough to vote) passed an extremely vital resolution concerning the ASUM stand on the El Salvador situation.

The resolution reflects my political and personal views. However, the resolution may not be a reflection of your views.

And this is my point: When dealing with crucial issues, such as the ASUM stand on International Affairs, I believe that it is the duty of CB to make a conscientious attempt to gain substantial feedback from the students they represent, before passing a resolution that reflects on ASUM as a whole.

On the other hand, I realize that it is the responsibility of the students to relate any discrepancies in opinion to their representatives. LET YOUR CB KNOW HOW YOU FEEL!

CB, I'm behind you this time. I do feel, however, that you have overstepped your boundaries. Since the resolution has passed, I hope that other students will voice their support.

The future of this country really does lie in our hands!

Lisa Larimer  
junior, interpersonal communication

## Fantasy argument

Editor: I refer to Uche Ogowa's letter, "Notice the beam," which appeared in the *Kaimin* of Jan. 19. I too despise the government of Botha's Nationalist party in my country, South Africa, but in the interest of fairness I cannot

remain silent lest some of your readers should accept all the statements in Uche's letter.

Uche would have a reasonable argument except that it is based on fantasies about life in South Africa. Glaringly obvious are the statements, "Hundreds of blacks are being tortured to death daily in South Africa," and the idea of a "systematic annihilation" of blacks, which are so far from true that they would be laughable were it not that many readers are likely to have believed them. I wonder if the *Kaimin* would have published a letter which stated, as a generally accepted fact, that the Indians of Montana are confined to reservations to facilitate their orderly extermination. Probably not; yet that is plainly the equivalent of what you did by publishing Uche's letter. It saddens me to think that, had I not been here to challenge Uche, his statements might well have passed for the truth.

The following brief points are given in refutation of Uche's general conception of life in South Africa. They show that human rights in South Africa, though sadly not what they should be, are indeed in better shape than in most communist and dictatorial countries around the world.

(i) South Africa has freedom of the press, though it is admittedly subject to stricter control than the press in the U.S.A.

(ii) All South African workers, regardless of race, have the right to form trade unions or join the trade union of their choice, such unions having basic legal rights.

(iii) South Africa has a long tradition of an independent judiciary, one of the pillars of a democracy, to which all citizens have appeal.

I champion anyone's right to express their own opinion, but a clear distinction exists between opinion and statements of fact. South Africa, because of its brand of statutory racism, is quite rightly the target of international criticism, but such criticism should nonetheless be based on fact. It is very convenient to cast South Africa as the epitome of all evil, but that is not the truth.

In his attempt to construct a strong argument Uche has shown a flagrant disregard for the truth; an action which not only undermines his argument but which also makes him guilty of the same bigotry of which South Africa is accused. I challenge Uche to, through this column, either give proper substantiation of his statements or to withdraw them.

## Mighty Warriors might bust

Editor: My Native American Studies (NAS 395) class, "American Indian Image on Film" is designed to view the image of the American Indians as they appear on film in the cinema. Some of the earlier films such as, *Redman's Honor* helped stereotype American Indians. These stereotypes would later be further expanded upon and maintained.

I recently viewed an educational film that was popular and used by various schools in Montana for educational purposes.

The film is called *The Mighty Warriors*. It centered around the relationship between the Plains Indians and the white man. The University of Montana purchased the film and can be found, if it's not checked out, at the IMS according to one of my instructors Mr. Rick Hohman.

*The Mighty Warriors* film contains some very vague information and a lopsided view of the Plains Indians. It refers to the Plains Indians as "war loving people" and artists in developing scientific forms of torture, which are very negative views of Plains Indians.

I am an Assiniboine Indian, a Plains Indian, and I don't recall my Grandmother or parents encouraging me into going out in the world and getting into a fight with the first person I see. Nor do I recall them instructing me in forms of "scientific" torture.

*Mighty Warriors* tells of various confrontations (wars, battles and massacres) between the Plains Indians and the United States Cavalry. It mentioned the confrontations as being costly in terms of money to the U.S. Government and portrays the Plains Indians as "merciless savages" who didn't give the young "greenhorn" cavalrymen a chance. The film does make it a point to portray the Plains Indians as savages as they mutilated the bodies of these young "greenhorns."

The film mentions the Sand Creek Massacre of 1864 and failed to mention how many of the Indian bodies, both young and old, were mutilated by the saber of the U.S. Cavalry, "greenhorn". *Mighty Warriors* discusses Wounded Knee and failed to mention that there were over 360 Indians and only 13 rifles amongst them and not 250 Indians being disarmed as the film mentions.

*Mighty Warriors* discusses the Ghost Dance of the Sioux and labels it "pathetic." The scene is a drum with Indian singers singing and Indian dancers dancing and the film gives the viewer a look at the Ghost Dance. Wrong. The scene is showing a Round dance and not a Ghost Dance.

I can't see the justification for the University of Montana for purchasing this film and distributing this film as an educational film for schools in Montana. I know there is a need for educational information concerning American Indians but I don't see the justification for the promotion and distribution of a film that is inaccurate about American Indians as *The Mighty Warriors* film.

It saddens me to think that some young Indian school student in Montana will view film in class and how the film will affect that young person's image of themselves. And how it will affect their friend's view of them. Let's get the film *The Mighty Warriors* off the distribution list and put it in the can, preferably the garbage can, where it belongs.

# Interviews for RA positions soon to begin

By Steve Dodrill  
Kaimin Contributing Reporter

One of the larger projects University of Montana Housing undertakes during the course of the school year began Tuesday. The job of interviewing and selecting applicants for resident assistant positions is a process that Ron Brunell, director of Residence Halls, estimates will take at least 285 hours to complete.

An RA is a Residence Halls staff member who helps students, especially those on his dormitory floor, make college life a little easier.

There are several basic responsibilities an RA has, Brunell said. First, the RA is a source of information about the university. He is also a friend and counselor to the students on his floor. An RA is a resource that can refer students to the proper source when problems arise. There is also an administrative responsibility that comes with the job, such as checking students into the dorms and helping in the selection of new staff members. Finally, the RA has the responsibility to keep the behavior of dorm residents under control in the dorm.

A candidate for the position of RA must have a minimum GPA of 2.00 and be enrolled as a full-time student. Residence Halls experience is preferred, but not required, Brunell said.

Those applying for the job go through at least two interviews. Brunell said that in addition to himself, Residence Halls tries to schedule two supervisory staff members and two RAs to sit in on each interview. Supervisory staff members are head residents and assistant head residents. Following the interview, staff members evaluate the applicant, and each one gives him a score. The average of those scores results in an overall rating for the interview.

The first interview is held during Winter Quarter and is used to acquaint the staff with the applicant. In the next interview, which is held Spring Quarter, Brunell said the applicant is placed in the situation of being an RA and asked how he would solve a certain problem if it arose. All situations posed in the interview are based on actual problems that have occurred in residence halls in the past, he said.

After the second interview, Brunell and the supervisory staff screen all applications and narrow the field to about 50 men and 50 women.

A third interview is held for those applicants. This time, the interviewee faces a mix of the first two sessions. The staff also has an opportunity to clarify any questions raised about the applicant as a result of the previous interviews.

An average of 20 to 25 positions

open up each year, and the competition for the jobs between the final 100 applicants is "much keener" than when the entire group of applicants is considered, Brunell said.

Last year, about 300 people turned out for the interviews. Brunell said the number of applications received this year is close to that.

The financial benefits of the job are a major reason for its popularity, Brunell said. In addition, the staff has a good reputation on campus and firms look favorably on a resume that lists a job like this one, he said.

An RA's salary consists of payment of room and board. Supervisory staff are on a higher pay scale. Assistant head residents earn \$150 a month, 10 months a year, in addition to room and board. Head residents make \$250 a month, 10 months a year, in addition to room and board.

Brunell added that Residence Halls is currently accepting applications for supervisory staff positions. Applicants must be graduate students, preferably with Residence Halls experience or undergraduates who have had previous experience in a residence hall. There is also a minimum requirement of a 2.00 GPA for these positions.

Once a person becomes an RA, he is evaluated quarterly by the supervisory staff of the dorm. If

there are any problems, Brunell said, steps are taken to correct the situation. If the problem persists, the RA may be dismissed from his duties, he said.

An RA may hold his position for as long as he is qualified, although Brunell said most people don't stay for more than two years.

"It's been all I expected and more," said Sue Van Swearingen, a first-year RA in Miller Hall. She said the job requires more work than she thought it would, but "the rewards have been incomparable to the responsibilities."

## Creationism ruling may not affect colleges, universities, observers say

College Press Service

The federal district court ruling overturning an Arkansas law requiring primary and secondary schools to teach the creationist view of life's origins probably won't have much of an effect on colleges, where creationism still hasn't made many inroads in biology courses, observers say.

An informal College Press Service survey of February 1981 found that a number of secular colleges had recently begun to teach creationism as "another theory" of the origin of life.

Despite the contentions of some creationism advocates, only a few more secular schools have included creationism in their curricula in the ensuing year.

"We're beginning to see a two-model approach being taken up" in colleges, says Richard Bliss of the Institute for Creation Research. "We are hearing from more college professors who want to do it."

But Bliss was unable to name any specific campuses that have actually adopted creationism in the last year. At that time, colleges like Iowa State, West Valley College near San Jose, San Francisco State and Michigan State had instructors teaching the theory of divine creation along with evolution.

Most religion-affiliated colleges have always taught creationism with evolution.

The bulk of the pressure to teach creationism in secular schools has been directed at primary and secondary schools. A scientists' group formed to resist those pressures says there are creationist fights in 42 states, including Arkansas.

"I hope we never see legislation on the college level," says Bliss. "We would far rather go the route of persuasion."

That route hasn't always been productive. In a response similar to those of other faculty members contacted for this article, Indiana University associate biology professor Thomas Kaufman cedes that creationism "should be taught, but in the context of religion, not science."

"Creationism is a religious view, and does not have a place in the science classroom," agrees Wayne Moyers, head of the National Association of Biology Teachers.

Even at San Francisco State, which creationists often cite as a "two-model" college, biology department Chairman Paul Barnes says divine intervention

is briefly treated along with "other theories which people have considered over the centuries."

College textbook publishers also report relatively little pressure to include creationism.

Greg Gallath, a regional sales manager for Worth Publishers, says an exception is Bob Jones University in South Carolina, which "will screen salesmen at a gate and won't let in certain guys if they've sold offensive books."

Many people's tombstones should read, "Died at 30. Buried at 60."

UM profs to explain results of their studies

By Yvonne Lucero  
Kaimin Contributing Reporter

For the second year, professors at the University of Montana will share their studies with one another and the public through the Faculty Showcase Series.

The series, sponsored by the Faculty Development Committee and funded by the Excellence Fund, is designed so that faculty members can discuss their research and creativity in such a way that other faculty members will understand it, according to Don Spencer, dean of the UM graduate school.

He said that while the series is geared to the faculty, it also is open to the public.

Richard Hugo, professor of English and well-known poet, started this quarter's part of the series last week with a reading of his own poetry.

The presentations, which take place Wednesdays at noon in room 307 of the Botany Building, will continue this week as Philip Bornstein of the psychology department gives his lecture, titled "The Art of Increasing Marital Happiness."

Bornstein said he plans to integrate experimental research in the area with his own clinical research. He said he will use his recent book *Loving*, as a reference.

He described *Loving* as a self-help book for people who are dissatisfied with their relationships or want to improve

them.

A schedule of this year's series has not been made and Spencer doubted there would be a presentation every Wednesday. He said distribution of flyers announcing the various presentations should begin within a week.

In February Assistant Professor of English Stewart Justman will discuss author George Orwell and Art Professor Rudy Autio will present a slide lecture of his work in ceramics.

In May Assistant Professor of English Robert Johnstone will discuss author Northrop Frye's views of the Bible.

Also scheduled for Spring Quarter is Janet Wollersheim, professor of psychology, who will discuss what psychologists know about depression.

Thomas Huff, professor and chairman of philosophy department and a member of the Faculty Development Committee, said the series is one of many efforts of the committee to "keep and help maintain the vitality of the faculty."

The program should help faculty members become better acquainted with each other and, therefore, more inclined to consult with one another, she said.

World News

Co., which at one time was one of the largest gold producers in the world.

• President Reagan, refusing to try "to balance the budget on the backs of American taxpayers," says he has no intention of changing his economic policies despite the prospects of giant deficits. Rejecting his advisers' call for higher taxes, Reagan told Congress Tuesday night that he is sticking to his tax-cutting course.

• Numerous religious leaders have criticized the U.S. administration's policy of deporting Salvadoran refugees and turning back boats carrying Haitian refugees to this country. In a joint letter to President Reagan, officials of national Protestant, Roman Catholic and Jewish organizations said that these actions violate principles for which America stands.

MONTANA

• State officials plan to initiate a pilot program that they hope will show whether "workfare" can be tied successfully to Montana's largest welfare programs—Aid to Families With Dependent Children. Under the program, some able-bodied AFDC recipients will be selected to work off part of the benefits they receive. State officials say they hope the participants will learn some job skills and be more inclined to want to work.

• Two Montana Supreme Court justices said yesterday that their fellow justices' last decision to uphold the conviction and death sentence of Duncan McKenzie "failed miserably" to bring justice to the case. McKenzie was convicted for the kidnap and brutal sex murder of Conrad schoolteacher Lana Harding in 1974. His four state appeals and current appeal to the federal court system have caused him to miss numerous execution dates.

THE WORLD

• Soviet Foreign Minister Andrei Gromyko said yesterday that the United States "must end all interference" in Poland, that the Kremlin has no plans to talk about Poland with Washington and that the matter was discussed only briefly with Secretary of State Alexander Haig Jr. Gromyko said the Warsaw regime's imposition of martial law was exclusively an internal Polish matter.

• Leftist guerrillas yesterday hijacked a Colombian jetliner carrying 128 passengers, forced the pilot to land at the Bogota, Columbia airport and then took off again for an undisclosed destination, authorities said. The seven hijackers, who said they were members of M-19, Columbia's most active guerrilla group, threatened to blow up the plane if the army moved in while they were at the airport in Bogota, officials said.

THE NATION

• Treasury Secretary Donald Regan said yesterday that the Federal Reserve's erratic control of the money supply is partly to blame for the recession and could threaten President Ronald Reagan's program for economic recovery. But the Federal Reserve Chairman has been insisting that the central bank has no choice but to continue its tight credit policy to fight inflation, adding that it is now up to the president to lower the national deficit so interest rates do not surge again.

• Claiming that the Black Hills belong to them, the Oglala Sioux Indians of South Dakota filed a \$6 billion suit Tuesday against a mining company for trespassing and taking gold from the hills in the last century. The suit was filed against Homestake Mining

# Government wants to censor federally-funded college research

College Press Service

"Here it comes," whispered the professor to a reporter sitting next to him at the recent American Association for the Advancement of Science (AAAS) convention. "They're going to say why we should like to have the boom lowered on us."

Indeed, Adm. Robert Inman, deputy director of the CIA, proceeded to tell the assembled AAAS members why they should submit the results of their government-sponsored research to the government for censoring.

Inman presented a frightening scenario of the government giving millions of dollars to a university lab, which develops a vital piece of knowledge that, if not pilfered by a foreign student on the campus in the employ of his or her own government, would eventually fall into the wrong hands when published in an academic journal.

The issue has become even hotter this year, as the government dramatically increases its sponsorship of military spending on the nation's campuses.

And as the Pentagon replaces the National Science Foundation as a regulator of academic research, professors are worried about being subjected to constant censorship.

But federal money — even with strings attached — is about the only money available to the academic community these days. "Many of us (researchers) find it's a choice between having a job and violating the very principles of academic freedom that created our jobs in the first place," says George Mariel, the University of Chicago professor who predicted Inman's boom-lowering speech.

There is a lot of strings-attached money being offered.

The Department of Defense (DOD) will spend an estimated \$709.7 million for research on college campuses in 1982, up from \$495 million in 1980.

For all research, including that done by the private sector, the DOD will spend \$20 billion. The National Science Foundation will distribute \$1 billion.

Most of the Pentagon money will go to hard sciences like physics, engineering, chemistry and math.

But the professors getting the money wonder how much of their completed research will be deemed "secret" for national security concerns and barred from publication in the academic community.

Many of the major research universities — including Wisconsin, Johns Hopkins and Michigan State — adopted rules during the late sixties and early seventies that prohibited their people from doing any research that could not ultimately be published.

"Our position as a university," explains Joe Sayrs of Wisconsin's engineering department, "is that if it (research) is done, it will be published."

A Wisconsin professor is in the middle of an emerging challenge to that policy. The Air Force is considering trying to ban publication of engineering Professor Shien-Ming Wu's research, which Wu did in 1980 under a \$100,000 Air Force grant.

Sayrs says the university is determined to publish Wu's work. The Air Force is still deciding if it will pursue the issue.

The government, however, is actively pursuing tighter control of other kinds of research. In 1980, the Pentagon told colleges to keep foreigners out of certain kinds of government-funded electronics research. The same year, the National Security Agency (NSA) suggested ways of keeping a lid on cryptology research, where recent breakthroughs in technological code-breaking have been dramatic.

In response to government concern, the American Council on Education helped create a Public Cryptography Study Group, composed of NSA and academic officials.

The purpose of the group, according to David Kahn, who has written two cryptography books, was to encourage cryptologists to censor themselves voluntarily.

After initially rejecting

research guidelines, last February the group voted to accept non-binding voluntary strictures as long as a professor could publish the work, even if the group advised against it.

Since then the group has reviewed about 25 papers, Kahn says, and censored none.

But Kahn sees the panel itself as a threat to academic freedom.

"This is the first step toward anti-First Amendment legislation," he contends. "It's the opposite of what the whole national security issue is all about."

Kahn claims that NSA officials have warned professors that if the voluntary censorship system doesn't work, they will sponsor legislation that would bring cryptology research firmly under government control.

The Reagan administration, added George Washington University Professor Mary Cheh at the AAAS convention, tends to "favor censorship over the free flow of ideas and information."

The voluntary censorship panel "was set up because academic researchers — unless they have worked for the government — won't know what needs to be classified: What we are doing is offering assistance."

"If we received a paper that caused a problem — and we don't expect that to happen — we would go to the professor and engage in personal discussion and try to reach an accord," Tisdale says.

"Let me stress that we don't feel very many papers will even be a problem," he adds.

To Kahn, the number of papers is beside the point. "I'm opposed to institutionalized censorship," he said. "If there is harm in national security, the loss is far outweighed by the benefits of freedom and open discussion."

ASUM is accepting applications to fill the vacant Central Board positions. Deadline to apply is Friday, January 29 at 5:00 p.m. Applications are available in the University Center, Room 105. For more information, call 243-2451.

# Former UM football players make good with New York Jets

By Scott Gratton  
Kaimin Contributing Reporter

The San Francisco 49ers may have won Super Bowl XVI, but in New York City the talk of the town is still the New York Jets and their turn-around season. Two former University of Montana football players like it that way.

Guy Bingham and Kent Clausen seem to have found a

GUY BINGHAM

home in the "Big Apple," and neither is too worried about getting cut from the team and not spending time in Shea Stadium next fall.

The New York Jets posted a 10-5-1 record and played in their first playoff game since the Joe Namath era of the 60s. The season was a happy one for the Jets and the city of New York. Both suffered through a 2-14 season only a year ago.

"It was something I've never felt before," said Bingham. "Even when we lost a few games this season the people loved us. When you're winning, it seems like everyone is behind you."

Bingham has been with the New York Jets since the 1980 season, and Clausen started playing for the team last fall. Both returned to Missoula after last fall's football season wrapped up.

Bingham and Clausen were both stand-out players when they attended UM. Bingham, a 6-foot-3-inch, 252-pound offensive center, was a two-time First Team All-Big Sky Conference pick and received the Paul Weskamp Award for the outstanding lineman in 1978 and 1979. Clausen was First Team All-Big Sky Conference in 1979 and was voted the Most Valuable Player on the UM team in 1980.

In the National Football League, both players are doing an equally impressive job.

Bingham, a senior in health and physical education who hopes to graduate from UM this spring, plays on the specialty teams and is the Jets' deep snapper on punts.

Bingham was given honorable mention as the NFL's best deep snapper by *Inside Sports* magazine, and was named to the *Football Digest* magazine's All-Rookie team.

Staying healthy is Clausen's biggest concern. The 6-foot-5-inch, 235-pound inside linebacker suffered a knee injury the third day of practice last year and was placed on the injured reserve list for the rest of the season.

Clausen, who graduated with a degree in business administration last year, still practiced for 15

weeks, and was almost activated the tenth game of the season. Because the Jets were afraid they might lose Clausen when he was placed on waivers, they decided to keep him on the injured reserve list.

According to the Jets offensive coordinator, Joe Walton, both players have "a bright future" in the NFL. Walton said the experience Bingham is gaining playing behind All-Pro center Joe Fields will help him in a few years. "Guy has good potential and will very possibly start for us in a few years," Walton said.

Walton called Clausen a "great athlete" and said he should have a good season next year if he can stay healthy.

Clausen said he hopes to get some playing time in next year. He said it will be hard to make it through training camp because the Jets carry only six linebackers on the 44 man roster, and "a lot of the old veterans are pretty well established." Clausen added that the limited number of linebackers could be an advantage to him because of the length of the season, and the possibility that someone will get injured.

"I believe I can play, I just have to be in the right place at the right time," Clausen said. "There's a lot of luck involved."

Both Bingham and Clausen said that it was a dramatic change going from college to pro football. "The players are bigger and faster, and most are just better athletes," Bingham said.

"In a way it is not quite as intense in the pros. It's treated as a job and there's not as much rah-rah," Clausen said. "The players are coached very well, and the mental part of the game is more

evident. The pro coverages are more demanding and all season I only saw three or four mistakes."

Clausen said practice wasn't quite as demanding as in college, but that the time spent watching films and studying was increased.

Both players are in the middle of renegotiating contracts for next season. They both plan on working out and getting ready for a week-long camp in March in preparation for their return to practice in mid-July.

Bingham attributed the winning season to Walton and a change of attitude among the players. "Walton is a great coach. He brought in new ways and terminology but really got players to work hard," said Bingham. "Whether you're winning or losing, things just kind of snowball. We just got on a roll and started winning."

KENT CLAUSEN

## State Department claims Cuba linked to drug smuggling

WASHINGTON (AP) — The State Department claims it has evidence that links the Cuban government to drug smuggling activities in the United States.

The allegation centers on the activities of Jaime Guillot Lara, a Colombian who allegedly funneled arms and money to a Colombian leftist group in return for Cuban aid in smuggling marijuana shipments to the United States.

"This was a real shocker," said a State Department official, who asked not to be identified. "We had always assumed that Cuba was puritanical about drugs. This

represents a real change in Cuba's attitude."

The officials allege that the narcotics ring was headed by Guillot, who is in custody in Mexico on contraband charges.

They said Cuba facilitated the alleged drug trafficking by permitting large "mother" ships carrying marijuana to take sanctuary in Cuban waters while awaiting smaller "feeder" boats from the Bahamas and Florida.

The officials said Guillot has admitted he worked for Cuba in purchasing arms for the M-19 leftist guerrilla group in Colombia.

*Soldier of  
Orange*

*Soldier of Orange* (1977), a film by the director of *Cathy Tippel*, is an epic tribute to the courage and sacrifices of the Dutch resistance in WWII as seen through the eyes of a group of college friends who come of age during the war. Styled after the Hollywood war movies of the '40s, it is a much more emotionally resonant movie than these that manages to be every bit as exciting. Few, if any of the movies that *Soldier of Orange* might be compared to have character relationships as compelling, and in this regard, it makes recent films like *Gallipoli* look fake-lyrical and schematic. Based on Erik Hazelhoff's autobiographical novel, Verhoeven's film stars the superb Rutger Hauer—he of the piercing blue eyes and blond looks that call to mind Paul Newman—as Erik, whose bravery won him a post as Queen Wilhelmina's personal aide. Edward Fox, as a droll English officer, and the very sexy Susan Penhaligon head a large and talented Dutch and English cast. *Soldier of Orange* runs 2 hours, 45 minutes (and you'll be sorry to see it end), so we'll have *Special Showtimes* at 6:30 & 9:30 p.m. every evening, and discount matinees Saturday and Sunday at 2:00 p.m. (No late shows this weekend.) Color.

Malmstrom officer lectures . . .

## Nuclear war not U.S. policy

By Kyle Albert  
Kaimin Reporter

Speaking as a civilian, the lecturer said he "wouldn't particularly like to see the MX at Malmstrom." The surprising thing about this statement was that it came from Lt. Col. E. L. Burchfield, commander of the 341st Missile Wing at Malmstrom Air Force Base in Great Falls.

The lecture, titled "National Defense in a Fragile World—Is America Willing to Pay the Price?" was the fourth in the Warfare in a Fragile World series, sponsored by the Environmental Studies Department.

Burchfield has served at Air Force posts all over the world and has worked in the Pentagon and as an assistant to General Ellis, the commander of the Strategic Air Command.

The United States' nuclear weapons are deployed in a triad system, using B-52 bombers, nuclear submarines and missile silos. Attacks could be launched by air, sea or land-based missiles.

The Soviet Union is now producing their Backfire bomber at the rate of 30 per year. The Backfire is the only intercontinental bomber in production in the world, he said.

The Soviet civil defense system is also much more developed than America's, he said. The Soviets have 115,000 full-time personnel, 20,000 blast shelters, command posts for their leaders and protection for about 11 percent of their urban population and 24 percent of their workforce, Burchfield said.

A nuclear war would be an exchange of missiles and demands for surrender coupled with subsequent threats, Burchfield said.

"It is not U.S. policy to initiate a nuclear war," he repeatedly said.

## Bucklew . . .

Cont. from p. 1

The student members are: graduates — Steve Carey, law; Cindy Biggerstaff, political science. Undergraduates — Cheryl Bentley, junior in business administration; John Mercer, senior in forestry; and Nancy Ross, freshman in psychology.

Bucklew will have final say on all recommendations made during the planning process. He will also coordinate the schedule and activities of planning.

Bucklew helped install a similar planning process at Ohio University where Bucklew served as provost before coming to UM last August. The process proved to be instrumental in helping OU deal with problems of decreased enrollment and resources in 1977.

Another aspect to the process, which has been developed at UM, is an enhancement pool that will be one percent of UM's \$31 million budget. This amounts to \$300,000 to \$350,000 available to planning units for new project development. The units will bid for this money and Bucklew, with the aid of the UPC, will allocate it accordingly.

However, Habbe said there may be some problems with this

Burchfield said there are three alternatives where nuclear arms are concerned; nuclear war, an arms race that will ultimately bankrupt both superpowers or negotiations such as the SALT talks. He added that SAC favors negotiations.

planning process. "Planning indicates to some people that there will be additional resources, which is not necessarily true," he said.

Habbe also said that the planning process could diminish incentive for some deans or directors to make decisions because they may feel the UPC didn't give them enough money to work with.

"The first year (of the program) will clearly be a year of trial," he said.

Today, Bucklew is meeting with planning unit heads to get their reaction to the rough draft of the planning process document. Tomorrow, he will meet with the UPC to get its reaction to the rough draft, and in the afternoon he will receive the reactions of his administrative staff. Necessary revisions will be made and the document will be ready in published form next week.

The planning units will have until the end of March to formulate their responses to the UPC for 1982-83 academic year. The UPC has until the end of April to review those responses, and budget decisions will be made in May. Those decisions will take effect July 1, the beginning of the new fiscal year.
