This Syllabus is brought to you for free and open access by the Course Syllabi at ScholarWorks at University of Montana. It has been accepted for inclusion in Syllabi by an authorized administrator of ScholarWorks at University of Montana. For more information, please contact scholarworks@mso.umt.edu.
Syllabus

Psyx525: Psychological Evaluation I

Fall 2018

Meeting Location and Times:
Skaggs 246
Mon: 9:30-10:50
Wed: 9:30-10:50
“Optional” Q&A/Hands On Lab: Time & place TBA

Instructor: Greg Machek, Ph.D.
Email: greg.machek@umontana.edu
Office: Skaggs Bldg 240
Office Hours: Monday: 11:00-12:00, Wednesday: 11:00-12:00, and by Appointment

Teaching Assistant: Emily Hattouni, Skaggs 368
Email: emily.hattouni@umconnect.umt.edu
Office Hours: By Appt.
Mailbox: In the grad student mailboxes in student computer lab. Please note, however, that actual assignments will be handed into a designated box in the main psych office.

Required Texts:

Sattler, J.M. & Ryan, J.J. (2009). Assessment with the WAIS-IV. Jerome M. Sattler, Publisher, Inc.: La Mesa, CA

Additional Readings (Moodle):
Additional readings – or other material- will be available on Moodle.

Recommended Texts:

Purpose and Rationale
The main objective of this course is for students to develop competency in the use, scoring, interpretation, and write-up of commonly used tests of cognitive abilities. Students will further develop initial competence and familiarity with other cognitive measures that they may be asked to administer in professional settings.

Learning Goals:
1. Acquire skill in the competent administration, scoring, and interpretation of several individual tests of cognitive functioning
2. Understand the history of intelligence testing
3. To understand the legal issues related to the administration and interpretation of intelligence tests
4. Understand practical uses of intelligence testing, including their limitations
5. Exhibit proficiency in relaying assessments results
6. To train practitioners who use a scientific approach to evaluation and who understand the theoretical and empirical underpinnings of the construct of intelligence
7. To understand issues in administration and interpretation when assessing members of minority groups and exceptional populations
8. Understand intelligence test terminology; sources of error in intelligence testing, psychometric properties, standardization of intelligence tests, and appropriate uses of measures of intelligence

Materials:
You will need:
1. Large manila envelopes in which to hand in assigned reports, consent forms (see end of syllabus), protocols, and videotapes due to the confidential nature of the material.
2. Flash drives will be needed to record video and audio of some of your administrations.
3. A stopwatch is needed for some testing applications. Please find one that is quiet and unobtrusive. I have actually opened up digital ones and disconnected the little electronic speaker. Some (most?) people now just use their smartphones. Either way, make sure that the timer is as silent as can be, and is also visually unobtrusive/non-distracting.

Optional:
4. Some people prefer to use clipboards for their protocols.
5. With young children, it is often nice to give small tokens of your appreciation. These can also be used when the child seems to lose interest. Stickers usually work well. If you use candy, make sure to ask a parent if it is okay.
A Note on Academic Misconduct:
All students must exercise academic honesty. Academic misconduct is subject to an academic penalty by the course instructor and/or disciplinary sanction by the University. All students need to be familiar with the Student Conduct Code. The Code is available online at the Dean of Students’ website.

Additionally, I should point out that it would be entirely possible for you to fabricate a non-videotaped protocol. In other words, you could just supply your own answers, score them, etc. Don’t do it. It is unethical and would lead to a failure of the class, and possibly and ultimately, dismissal from the program. It is not worth it. This class is intensive in terms of its demands, and these demands come at a point in your graduate experience when it may be difficult to juggle all of your obligations. If you are having trouble meeting all of your obligations, talk to your advisor, the chair, another departmental faculty with whom you can confide and take guidance from, etc. But don’t consider shortcuts that would undermine your chosen profession and your future in it.

Students with Disabilities:
If you are a student with a disability and wish to discuss reasonable modifications for this course, contact me privately to discuss the specific modifications you wish to request. Please be advised I may request that you provide a letter from Disability Services for Students verifying your right to reasonable modifications. If you have not yet contacted Disability Services, located in Lommasson Center 154, please do so in order to verify your disability and to coordinate your reasonable modifications. For more information, visit the Disability Services website.

Withdrawal from Course:
The 15th day of class is usually the last day to drop the course with a full refund (although, always check the Registrar’s site for specific dates). For the next two weeks, students can drop with instructor and advisor signature. Dropping after that point requires a petition.

COURSE REQUIREMENTS:

Basic:

Attendance & Participation:
Attendance is required. Lectures and class activities will be important to the overall learning experience and cannot be made up. You are expected to contribute to the class through discussion and questions. In some instances, I may have you prepare something for a future class. For example, I may give you specific questions to consider for
subsequent readings. I generally expect that you will have done so and will be prepared
to discuss.

If absence is unavoidable, please let me know ahead of time. *Unexcused absences may
certainly impact your progress in the class and your final grade.*

**Testing**

You will administer and score seven (7) assessments, broken down as follows:

**CHILD FOCUS:**

School Psychology students and Clinical Students with a professed career interest
in working mainly with child (and/or child & family) clients:

4* Wechsler Intelligence Scale for Children, Fifth Edition (WISC-V). 1 of the
administrations may be on an adult (pretending to be a child; this could be a
cohort member). 3 must be on students 6-16 years of age. *Do not videotape
sessions of the WISC-V for which you use an adult.*

*(One (1) of these four will be your “FINAL”: 3+1)*

2 Wechsler Adult Intelligence Scale, Fourth Edition (WAIS-IV)
1 Stanford-Binet Scale of Intelligence, Fifth Edition (SB:V)

**ADULT FOCUS:**

Clinical Students with a professed career interest in working mainly with adult
clients:

4* Wechsler Adult Intelligence Scale, Fourth Edition (WAIS-IV). Two of the
administrations may be on your cohort members or other Psychology Graduate
students (but please do not share results- better yet, have the cohort member
“fake it”). Two must be on adults outside of the program. Many times, you will
be able to access U of M students through the Psychology Subject Pool, using
SONA- more later). *Do not videotape sessions of the WAIS-IV for which you use
other students in the Psychology Graduate program.*

*(1 of these four will be your “FINAL”: 3+1)*

1 Stanford-Binet Scale of Intelligence, Fifth Edition (SB:V)

For **GRADING** purposes, these administration requirements more specifically break
down as follows:

*6 (“Non-Final”) Protocols (60 points; 15 points for each protocol- only 4 of these are
calculated into your final grade):

Your protocols will be evaluated on a 15-point scale (15 = no major errors, 1
point loss for each major error; .33 points for each minor error). Of these six
“non-final” scores, your two lowest administration scores will be dropped, so the rest add up for a total of 60 (4x15) points possible.

Please note that you can review all of your own protocols for scoring and administration accuracy to catch your mistakes, before turning them in, except on your final administration. If you catch the mistake it will NOT count against you. Simply provide a brief, but clear, note regarding the mistake and your awareness of what you should have done otherwise. Again, however, this does NOT apply to your Final Administration (see below).

First videotape (your second videotape will be your “Final”): ONE (1) of these “non-final” administrations must be videotaped and it must be with the Wechsler scale of your emphasis (e.g. the WISC-V for School Psych students, the WAIS-IV for adult-oriented clinical students). See schedule for deadline to turn in this first videotape.

*Written Reports (6 points each: 18 points possible):
3 of your “non-Final Administration” submissions will have an accompanying brief report (as noted in the schedule).

*1 Final Administration (35 points; this will include the protocol, report (worth 10 out of the 35 points), and videotape of the administration).

This administration also has to be on your Wechsler scale of emphasis (e.g. the WISC-V for School Psych students and clinical-child students; the WAIS-IV for adult-focused students).

The scoring rubric for this one will include major and minor values twice (2x) that for the other administrations. For example, each Major error will count 2 pts, and each minor error, .66 points. You will want this to be one of your best examples. Students encountering seven (7) or more points in deductions on the administration (i.e., not the report) will need to redo the administration and may risk taking an “incomplete” in the course (actually, since this is so late in the semester, the student will almost certainly need to take an incomplete to give them time to redo an administration).

In general, it is strongly suggested that all students give multiple practice assessments to anyone who will sit still before attempting assessments for a grade. Perhaps you can cajole some of your classmates into this (plying them with free food and drink often works).
**Class Presentations:**
These are relatively open in terms of content, though it will need to be something not covered “in depth” during the class. Topics must be relevant to the course. Some ideas include:

- Presenting on an instrument of cognitive ability not covered in class (we have a couple in the test closet, such as the Wechsler Memory Scales, KABC, etc.- please ask);
- Presenting on a research topic of personal interest (e.g. assessing gifted students, cultural bias in IQ testing, use of standardized IQ tests in the assessment of LD, expanding on a particular theory of intelligence).
- Please see larger list of possible topics at the end of the syllabus.

If done individually, these should take about 25 minutes. You may partner up to do these presentations, though I will expect you to take about 50 minutes if two people are presenting. Each presentation should be done using visual aids, such as PowerPoint, and should be accompanied by appropriate hardcopy handouts. Topics for presentation must be submitted by October 1st. We can talk further about format and content during the semester and I will provide a handout of content areas to cover if you are presenting on another test battery. If you are covering another issue (e.g. giftedness assessment), then I would encourage you to set up a time to discuss your presentation content with me. Again, please be aware of the time limit and plan accordingly. It does not take too many slides/information to cover 25 minutes, or so, of time.

**Deadlines.** Protocols, reports, and observed assessments are to be conducted across the course of the semester. Please see the class schedule for times in which test protocols/reports are due. Lateness will be penalized at a rate of 10% per day late. However, if there are dire circumstances that preclude you from getting them in on time, please talk to me AS SOON AS YOU ARE AWARE OF IT, and we can try to work something out. You may turn in protocols, reports, and videos early as well.

**Subjects.** You will need to locate your own testing subjects. These cannot be children or adults who are being evaluated for services OR receiving services. Friends, neighbors, children of friends, and university students are all possible resources. Do NOT test the same person more than once with the same test. Do NOT use your own child for one of the videotaped (including final) versions. Also, as mentioned earlier, do NOT use a class peer (or any other psych graduate student) for any of the videotaped administrations, please. BEFORE testing subjects, you must secure their permission, or, in the case of minors, of their parents or legal guardian(s). Consent forms are on Moodle. Additionally, there is a “letter to parents” on Moodle. It is a letter from me to any prospective parent of a child you test. Please make copies of those. Do not try to recruit subjects at any institution (e.g. hospital, school).
Special Note: For WAIS-IV administrations, Psyx100 students can be accessed. You will need to sign up to the SONA system to advertise and to give the undergraduate student credit. The TA for this course will go over this in more depth, soon.

Confidentiality of subjects: Please note that consent/permission forms need to be handed in a separate envelope from the one in which you hand in the report/protocol/video. On both packets/envelopes, make sure that you write the type and number of test, and your name (Mary Whipple, WISC-V #3). This way, we can make sure that every test had the proper consent/permission form handed in with it.

Additionally, all reports and protocols should be de-identified. That is, only pseudonyms (fictitious names) should be used.

Result: No results generated from testing requirements for this class are to be disseminated to anyone other than the instructor and graduate assistants (this includes any portion of a written report). Because this course is a skill development course, it is probable that many, even most, of the test administrations will have some errors and, thus, limited reliability and validity. Therefore it is imperative that these reports NOT be used for decision-making purposes. Violations of this practice will be considered a serious breach of professional ethics. Curious parents or examinees can be told that it is being done only for training purposes and that you are not allowed, by policy, to give results. However, you can tell caregivers that the experience is meant to be a positive one, and tell possible subjects that the experience will be interesting, challenging, and maybe fun!

Grading:
Best 4 scores from your first 6, Non-Final, Protocols/administrations: 60 points
3 “Non-Final” Written reports: 18 points
Presentation: 20 points
Final Administration Protocol, Report, & Videotape: 35 points
Participation: 15 points
Total: 148 points

A = 94 – 100%
A-= 90-93%
B+= 87-89%
B = 84 - 86%
B- = 80-83%
C+ =77-79%
C = 74 -76%
C-= 70-73%
Etc. .
**Projected Timeline:** (please note that this timeline is subject to change, as are specific readings. I will try to give ample forewarning if this happens):

Please note that this syllabus is subject to change at the instructor’s discretion.

**Scoring Rubric**
(Subject to Modifications)

**Majors Errors**
1. Inappropriate basal or ceiling
2. Incorrect computation(s) (e.g. summation of scaled scores or raw scores, incorrect computation of CA, incorrect transformation of standard scores, etc.)
3. Omission of Query/Prompt *when indicated*
4. Omission of subtests (and make-up of subtest)
5. Incorrect transformation of standard scores

6. Administering wrong subtest (E.g.: Coding A/B)

7. Failure to give example or sample item where required
8. (administration of samples must be recorded on protocol)

9. Failure to use stimulus book if required (be careful of this, especially with Vocabulary)

10. Administering items or subtests in wrong order.

11. “Other” obvious situations that break from standardization, such as:
   - Not consistently reading the standardized instructions, teaching items, prompts, etc.
   - MAJOR or MINOR, depending on severity: Poor physical set-up, such as too much extraneous noise/distractions, or severe deviation from physical set-up mentioned in administration manual.
   - (I take into consideration that same things will be beyond your control, and that we will not always have the perfect environment)

**Minors Errors**

1. Judgment, i.e., assignment of inappropriate credit or failure to give appropriate credit on items (Similarities, Vocab., Comp.)

2. Omission of Query

3. Wrong starting level

4. Misreading chart in recording percentiles

5. Time not recorded when necessary

6. Failure to appropriately record examinee’s responses

7. Failure to provide all proper verbatim instructions (This is commonly encountered on L-NS on the WISC)

8. Doing ipsative analysis on “Overall” mean when there is a PRI-VCI discrepancy (stat. sig. AND low Base Rate), and vice versa.

9. “Other” basic administration errors, such as:
a. Incorrect base rates, percentiles, etc
b. Failure to present Block Design blocks properly, or failure to scramble blocks after each administration.
c. Consistently administering Digit Span items too quickly or too slowly.

This is likely not an exhaustive list. Errors encountered that do NOT accurately fit the above categories will be evaluated at the instructor and TA’s discretion.

**Note:** If in reviewing your practice protocols you realize you made a mistake, note the error in the margin of the protocol and it will not be counted against you. This applies to all protocols except the final.

**Possible Presentation Topics**

Assessment of Learning Disabilities: Past and present practices and related debate

This would be an excellent choice for a school psych student.

Assessment of the deaf and hard of hearing

Assessment of the visually impaired or blind

The presentation of an individually administered intelligence test not covered in this class

The Universal Nonverbal Intelligence Test (UNIT)
The Wechsler Preschool and Primary Scale of Intelligence, Third Edition (WPPSI-III)
The Wechsler Abbreviated Scale of Intelligence (WASI)
WJ-IV Test of Cognitive Abilities
KABC

Assessment of cognitive giftedness

Ceiling effects and other issues specific to the testing of intellectually gifted students

Issues in the intellectual testing of NA students

Emotional Intelligence

The use of individual norm-referenced tests of intelligence in the determination of specific learning disabilities

A look at cultural bias in intelligence testing: evidence for and against

Best Practices in using IQ tests with culturally and/or linguistically diverse populations
Issues in assessing Preschoolers with IQ tests

Cognitive changes throughout the lifespan

A thorough presentation on a specific theory of intelligence
  - Gardner’s Multiple Intelligences
  - Sternberg’s Triarchic theory
  - PASS (Planning, Attention, Simultaneous, Successive) Theory
  - CHC (Cattell-Horn-Carroll) Theory of cognitive abilities

Nature vs. Nurture in intelligence

An elucidation on historical perspectives and influences not covered in class

**Note:** I have texts, articles, or chapters, for most of these subjects. So, please inquire into these to help get you started.

**Bibliography of Readings**

**Other Readings to Consider:**
