

Sunrise Movement

We are building an army of young people to stop the climate crisis and rebuild just, equitable society.

Total U.S. Greenhouse Gas Emissions by Economic Sector in 2017

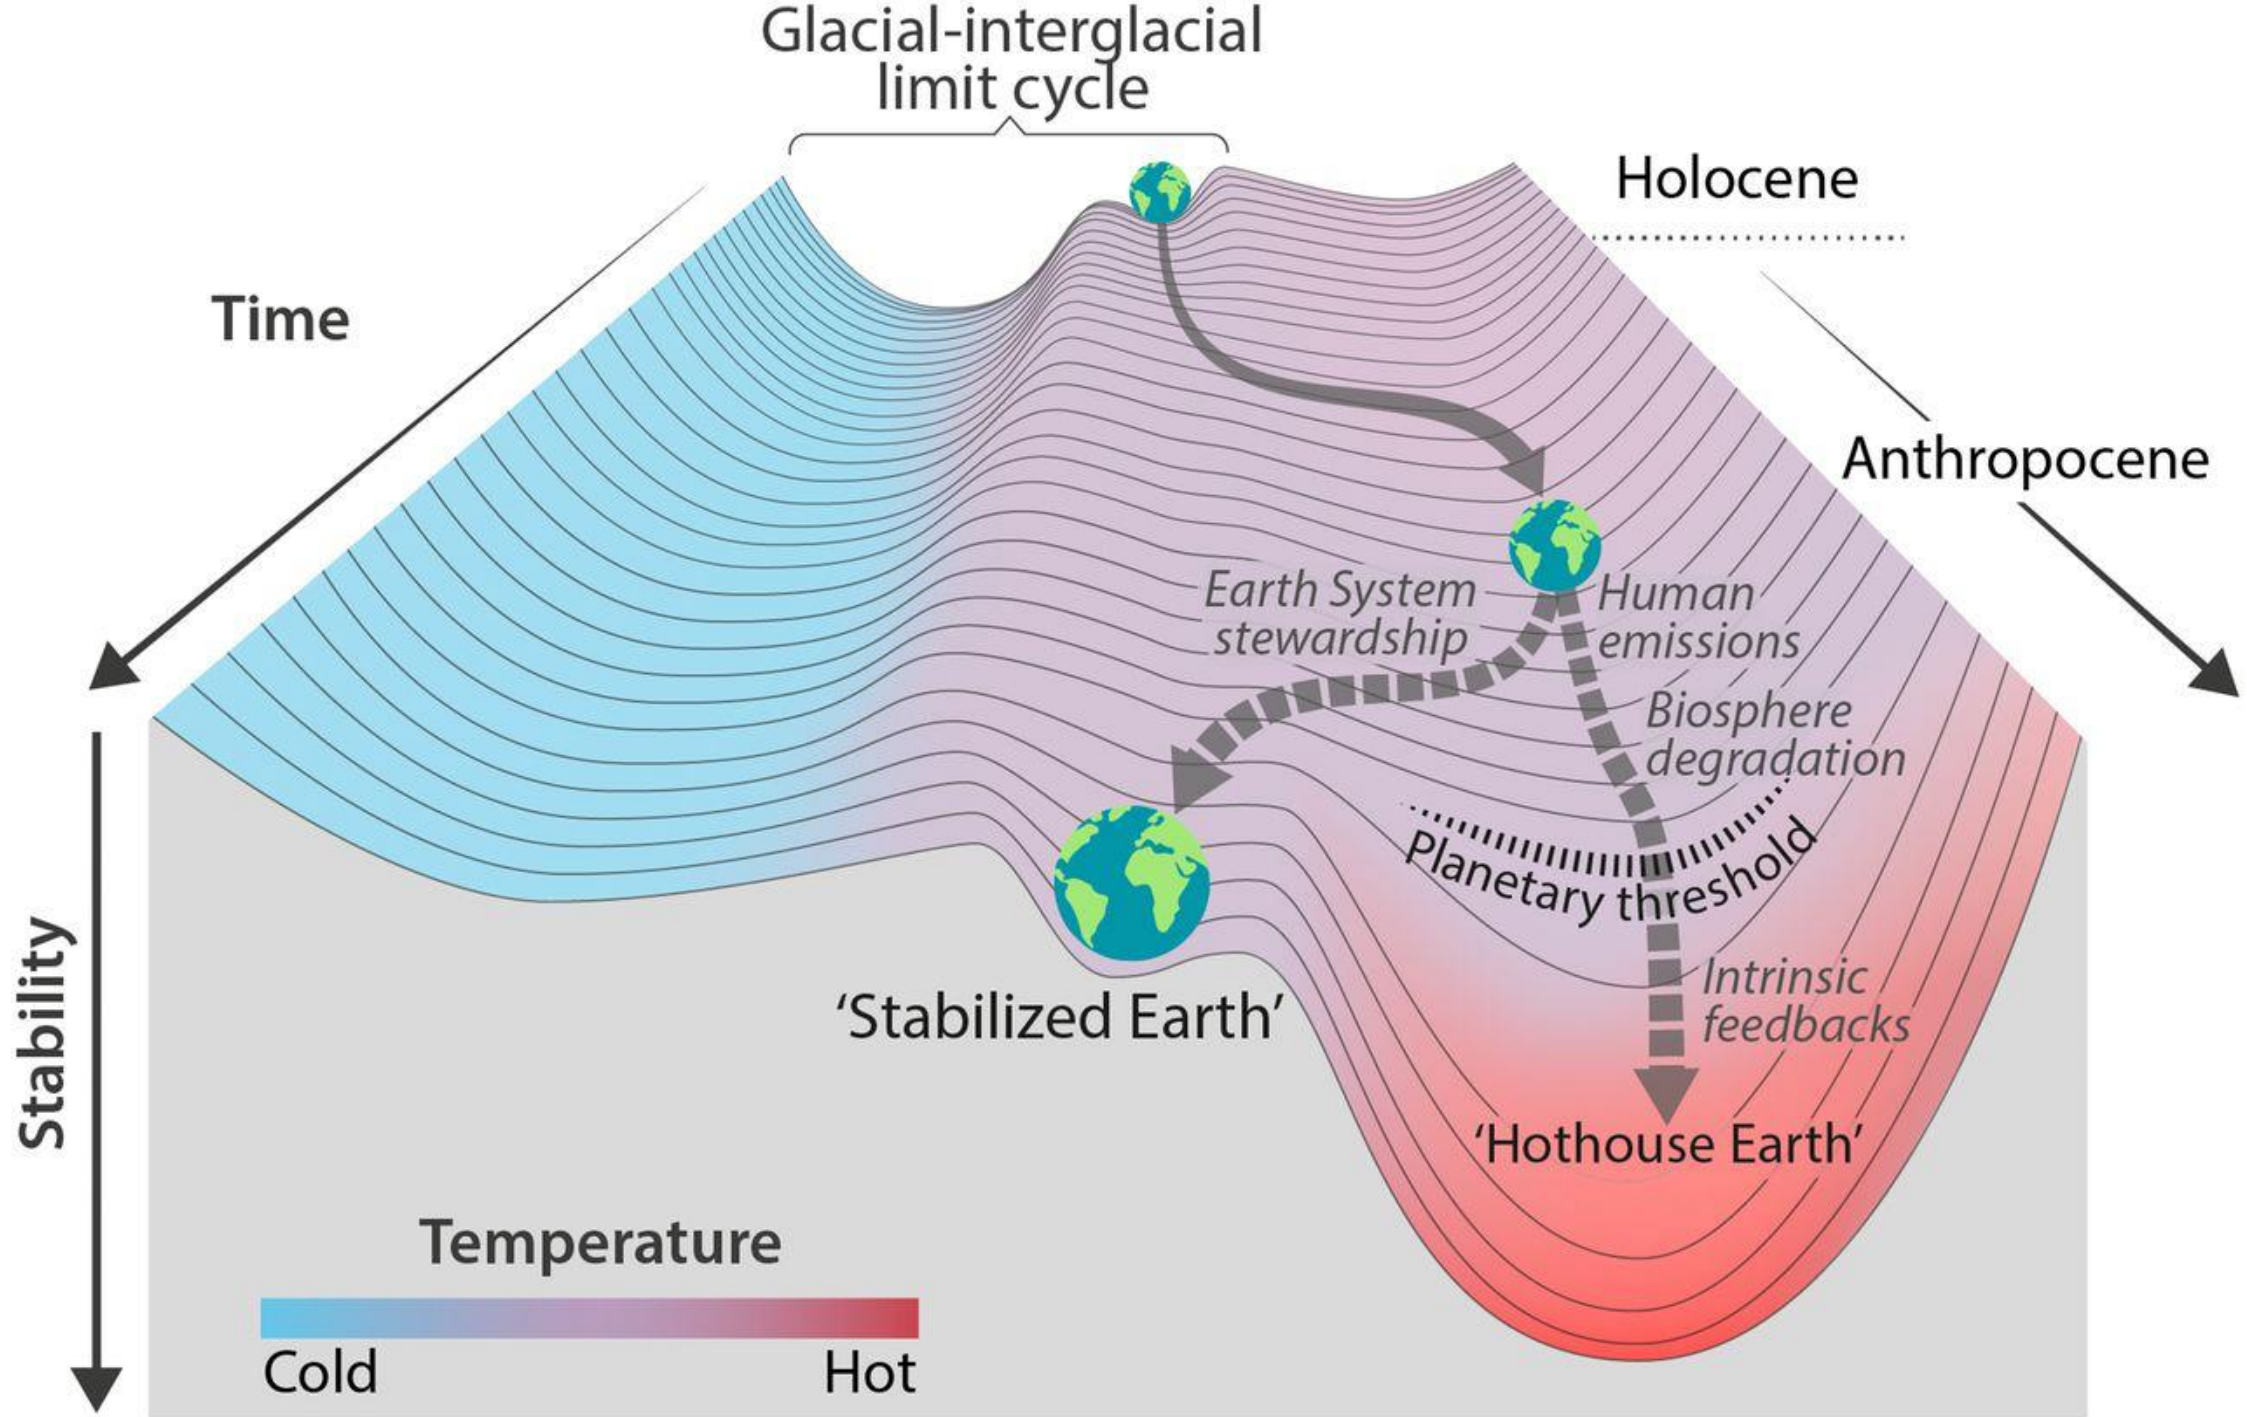

EPA 2017

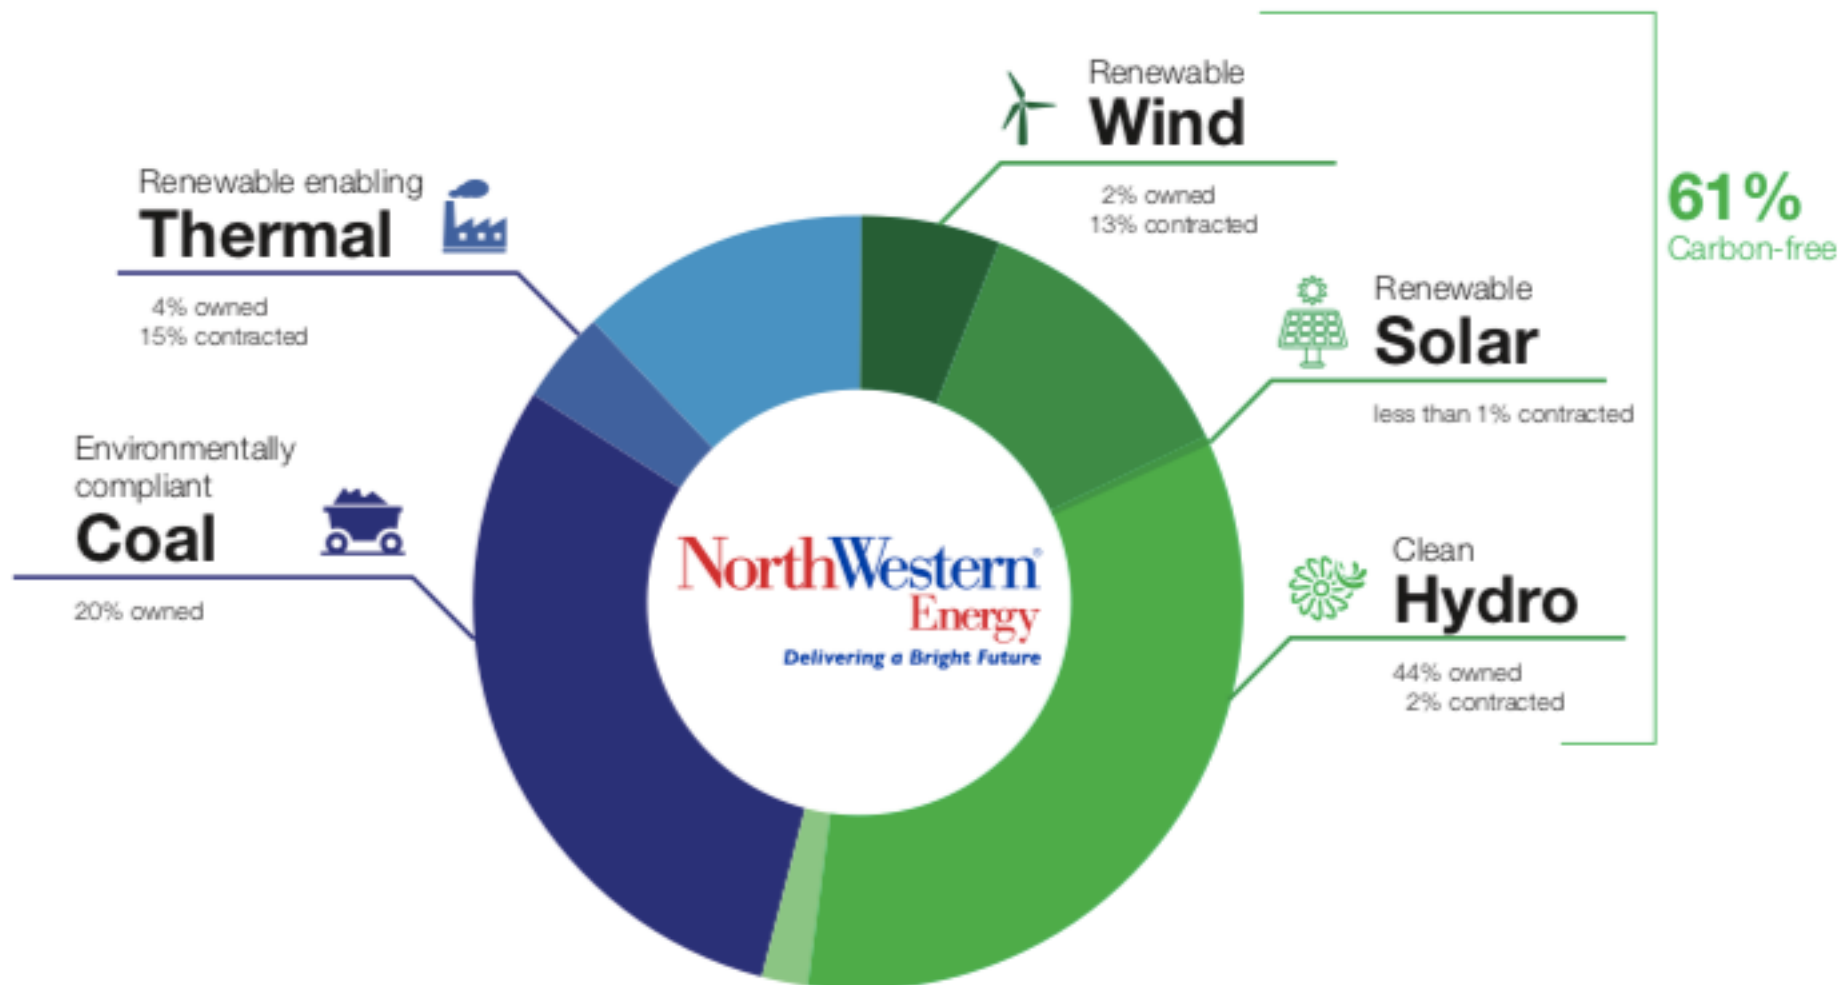

According to the International Panel on Climate Change (IPCC), reaching a global warming of 1.5°C will lead the Earth down a pathway of irreversible climate change.

According to the IPCC scientists, our CO₂ emissions for limiting global warming to 1.5°C must be about 65–90% lower in 2050 relative to 2010 emission levels.

This will require rapid, far-reaching unprecedented change to our energy grid.

Who is holding us back from the transition?

1. Money-corrupted politicians –

Our Governor, Congress, Senators, & Public Service Commission

2. Fossil-fuel industry executives

3.5%

*“Outcomes of over 300+ nonviolent and violent campaigns worldwide from 1900-2014, none of the cases failed after **achieving the active and sustained participation of just 3.5 percent of the population** -- and some of them succeeded with far less than that. Of course, 3.5 percent is nothing to sneeze at. In the United States today, this constitutes **over 11 million people**”*
