MSU SUPPLIES SPEAKERS

Forty-four Montana State University staff members, prepared to talk on 125 topics, can be booked as program speakers by organizations and institutions in the state, according to Homer E. Anderson, director of the MSU Public Service Division. The division makes speakers available on an expense basis, he said.

The speakers are drawn from about two dozen University schools and departments and include the deans of the Schools of Business Administration, Journalism, and Law and the chairmen of the Depts. of Bacteriology, English, Foreign Languages, Geology, Home Economics, R.O.T.C., and Speech.

The director of the Counseling Center, the circulation manager of the University Press, the head of Conservation Education Extension, the News Service photographer, and the minister to students of the affiliated School of Religion are among the speakers. Other speakers are from the anthropology and sociology, art, botany, music, philosophy, physics, and psychology faculties.

Inquiries about securing a speaker should be addressed to the MSU Public Service Division, Missoula, Anderson said. A list of speakers and their topics will be mailed upon request.

MSU ADDS LAB EQUIPMENT

A portable refrigerated centrifuge has been added to the laboratory equipment used for research on allergy being done at Montana State University by Dr. John J. Munoz, chairman of the Bacteriology Dept. The centrifuge was purchased with funds from a U. S. Public Health grant to Dr. Munoz. It operates in a refrigerator and is used to preserve substances in their native state.
