RESOLUTION TO CHANGE THE REGISTRATION ORDER ON DIAL BEAR

Whereas; The Dial Bear registration order currently is (from first to last) Students with Disabilities, Graduate Students, Post Baccalaureate & Seniors, Four Bear, Freshmen, Sophomores and Juniors, and;

Whereas; Freshmen currently are allowed to register using Dial Bear before sophomores and juniors, and;

Whereas; Freshmen tend to have more general education requirement classes and classes required for their majors that they still need to take and thus have a wider selection of needed classes to choose from, and;

Whereas; The University of Montana has a differentiated tuition that requires upperclassmen to pay a greater tuition than lowerclassmen, and;

Whereas; Because of differentiated tuition, sophomores that don't get their needed 100 and 200 level courses, that often exceed 100 students, completed will have to pay more for these classes the following year, and;

Whereas; Because of differentiated tuition, juniors pay more for classes then freshmen and thus should be able to register for classes before them,

Therefore Let It Be Resolved: The Associated Students of the University of Montana support the Dial Bear registration order (from first to last) of Students with Disabilities, Graduate Students, Post Baccalaureate & Seniors, Four Bear, Sophomores and Juniors, Freshmen.

Patience Llewellyn

Passed 2/4/98
RESOLUTION TO SUPPORT ALTERNATIVE C OF THE MT. SENTINEL MANAGEMENT PLAN.

Whereas; The 1995 Montana State Legislature enacted HB 395, Chapter 519 (MCA 7-22-2101) mandating all state agencies, including the University of Montana, controlling lands within the boundaries of defined weed districts enter into cooperative six-year integrated noxious weed management agreements with the respective Weed Boards, and;

Whereas; Mount Sentinel’s grasslands consist of 1477 acres, over 480 of which are under the University of Montana’s direct control, and;

Whereas; A 1995 University of Montana study found 91% of the 1477 acres infested with spotted knapweed, 29% covered with Dalmatian Toadflax, and 8% infested with leafy spurge, and;

Whereas; The continued spread of noxious weeds endangers the area’s natural, native vegetation which supports a large variety of wildlife, and;

Whereas; Alternative C, the preferred alternative of the Integrated Plant Management committee, “represents a balance of effective short term management of noxious weeds on the site, development and research of new tools for controlling noxious weeds and minimizes the use of herbicides while seeking to maintain and restore native plant communities” (Mt. Sentinel Management Plan and Environmental Analysis Draft), and;

Whereas; Alternative C offers none to very low risk to human health or water quality, and;

Whereas; Alternative C is predicted to be the most effective in reducing noxious weeds while increasing native vegetation and palatable forage for wildlife at a moderate cost.

Therefore Let It Be Resolved:

The Associated Students of the University of Montana support Alternative C of the Mount Sentinel Vegetation Management Plan, and wish to make this support known to the Integrated Plant Management Committee.

Mike Weinheimer
