Dr. John J. Taylor, assistant professor of microbiology and public health at Montana State University, has received an additional $4,500 grant from the National Institutes of Health of the U. S. Public Health Service, MSU President H. K. Newburn announced.

The grant was made to Dr. Taylor to continue investigations of the metabolic patterns in Blastomyces dermatitidis, a pathogenic fungus. The work was begun under a previous grant and the project has been recommended for another grant of $5,000, pending Congressional appropriation.

Herbert D. Seiter, director of the Montana State University Radio-Television Studios, will write a magazine bibliography for the RTNDA Bulletin, published by Radio-Television News Directors Association, beginning with the December issue. The bibliography will consist of summaries of articles of interest to association members.

Seiter takes over the assignment from Dr. Erling S. Jorgensen, who is on leave from MSU this year to direct an educational television study, conducted by the Montana Educational Television Commission and supported by a Ford Foundation grant.
