FOR IMMEDIATE RELEASE

The National Science Foundation has granted Montana State University $7,060 to support a program of "Research Participation for High School Teachers" at the MSU Biological Station at Yellow Bay, according to Dr. Gordon B. Castle, professor of zoology and director of the station.

Under the program, about a half dozen high school science teachers will work on research projects during the Biological Station summer session, June 16-Aug. 11.

The program will be directed by Dr. Paul H. Baldwin of Colorado State University, who will be a visiting professor at the station this summer. Dr. Baldwin is a well known ornithologist whose recent research on relationships between the woodpecker and the pestiferous bark beetle is of particular interest in Montana, Dr. Castle said.
