FOR IMMEDIATE RELEASE

Dual honors have been accorded to a Montana State University faculty member, according to MSU President Robert Johns. Dr. John J. Taylor, assistant professor of microbiology, has received a U. S. Public Health Service grant and an invitation to participate in an international science meeting.

Dr. Taylor will use the $12,200 grant from the National Institute of Allergy and Infectious Diseases to continue his research into the biological activities associated with certain human pathogenic fungi.

For several years the microbiologist has been investigating certain chemical changes associated with morphological variation of a diphasic pathogenic fungus and the means by which the expected growth phase may be altered. He has been asked to summarize his findings at a colloquium at the Congres International d'Histochemie, which will meet in Frankfurt, Germany, in the summer of 1964.
