FOR IMMEDIATE RELEASE

Montana State University has received a U. S. Public Health Service grant for the fifth consecutive year to continue research on cancer treatment, according to Dr. John M. Stewart, chairman of the Chemistry Department.

Dr. Richard E. Juday, professor of chemistry, is director of the research, which involves the preparation of compounds similar to steroid hormones for possible use in blocking hormone action. Many types of cancers are dependent on steroid hormones for growth, Dr. Juday said. These cancers can be inhibited by hormone antagonists. Compounds produced in the MSU laboratory will be evaluated by the USPHS for this purpose.

The current grant of $6,416 provides for the support of three student research assistants, Dr. Juday said. Kent Kaiser, Lyndhurst, N. J., has been named to one of the assistantships; the other two will be filled soon.

###
FOR IMMEDIATE RELEASE

Dr. John L. Wailes, Montana State University pharmacy professor, has received a continuation grant of $4,219 from the U. S. Public Health Service to support his research on preservatives on mold respiration, according to
