FOR IMMEDIATE RELEASE

Montana State University has received a U. S. Public Health Service Research Career Award to finance the position of Dr. H. Richard Fevold, assistant professor of chemistry.

Dr. John M. Stewart, chairman of the Chemistry Department, said the grant is for an initial period of five years, beginning July 1, 1965, and may be renewed to provide support for a total of 10 years.

Research Career Development Awards, according to the USPHS, are intended "to finance the positions of able scientists who plan to pursue careers in independent research and teaching. ...They are given to institutions in the United States on behalf of qualified candidates of superior potential capability in the sciences related to health."

Dr. Fevold is a biochemist engaged in hormone research. He is currently conducting a study of the regulation of the adrenal steroid secretory pattern, with the support of a grant from the USPHS Institute of Arthritis and Metabolic Diseases.

A member of the faculty since 1963, he is an MSU graduate in wildlife technology and holds a Ph. D. in biochemistry from the University of Utah. From 1961 to 1963 he was a USPHS postdoctoral fellow at the Biochemistry Institute of the University of Uppsala, Sweden.
