Dr. Ludvig Brovman, University of Montana professor of zoology, will be among about 100 scientists presenting papers at the National Academy of Sciences autumn meeting at the University of Washington this week.

Dr. Brovman's paper, "Neurosecretion in Microthalmic and Normal Rats," is a result of a series of experiments with rat colonies Dr. Brovman began in 1935.

The only member of the academy in Montana, Dr. George Bartelmez, UM guest investigator in zoology, will introduce Dr. Brovman at the meeting. Dr. Bartelmez has worked with Dr. Brovman in research with the rats.

Six other UM faculty members will be among the top level scientists attending the meeting Monday through Wednesday. They are Dr. Mark Jakobson, professor of physics; Dr. Robert Hoffmann, associate professor of zoology; Dr. Charles Parker, chairman and associate professor of speech pathology and audiology; Dr. M. J. Nakamura, chairman and professor of microbiology; Dr. Robert Fields, chairman and professor of geology, and Dr. H. R. Fevold, assistant professor of chemistry.

A UM graduate and member of the academy, Dr. Harold Urey of the University of California, also will present a paper on organic material in meteorites and participate in a symposium on surface features of the moon at the meeting.

The program will include symposia on universities and federal science policies led by Frederick Seitz of the academy, high energy physics led by J. Robert Oppenheimer of the Institute for Advanced Study, biochemistry and genetics led by Wendell M. Stanley of the University of California, and surface features of the moon led by George Wallerstein of the University of Washington.

George Eugene Uhlenbeck of the Rockefeller University, New York, will speak at a public lecture Monday.
